HIGH-TECH FOR YOUR PASSION

There's nothing in the world to compare with a SPORTEX rod. It owes its legendary reputation to the power of innovation and the unique technology which for decades has set standards worldwide. Today, our rods are a byword for reliability and master craftsmanship.

What makes SPORTEX rods so unique?

They are not simply uniform rods 'off the peg'.

Every rod is an individual creation, even within the same series, adjusted in length, action and component composition to suit the particular casting weight, distance and anticipated twist.

Our rods are symbols of quality and long service, attributes which are becoming ever more important in these days of fast-paced living. It is with pride that we can say that SPORTEX rods have excited generations of anglers with their reliability in demanding situations and their incredibly long

For rods without compromise only components without compromise will suffice

Anyone who wants to be a world leader when it comes to making rods cannot allow for compromise.

- Original FUJI guides and FUJI reel holders
- Natural cork of premium class AAA
- Wear-resistant Duplon of the highest grade
- Special lacquer – elastic and impact resistant

Every SPORTEX rod is the result of long years of practical experience and innovative technical know-how.

Our **technical knowledge** has grown over the decades. In the Fifties, we were renowned for the honey-coloured fibreglass blanks which set countless records in casting distance and precision. And when innovative **carbon fibre materials** arrived, we were among the first to recognise their potential for making rods, and put them to use. Thanks to our own **SPORTEX HT-Cross Winding blank technology**, our rods are unique in their combination of strength, lightness and speed.

life. Sustained research with new materials and material combinations are the bedrock. No other rod manufacturer can take advantage of such a wide range of materials for rod production.

We stand by our products – and that's guaranteed!

Our **quality control procedures** meet the highest possible demands, whether it is the selection of the material and components specific to the rod, the painstaking checking during the manufacturing process of the blanks or the ongoing inspections at the rod make-up stage. Every SPORTEX rod is an exquisitely crafted **quality product**. And we, the manufacturers, stand by that with our 10-year blank guarantee*.

*Add-on parts such as guides and reel holders are covered by the statutory 2-year guarantee

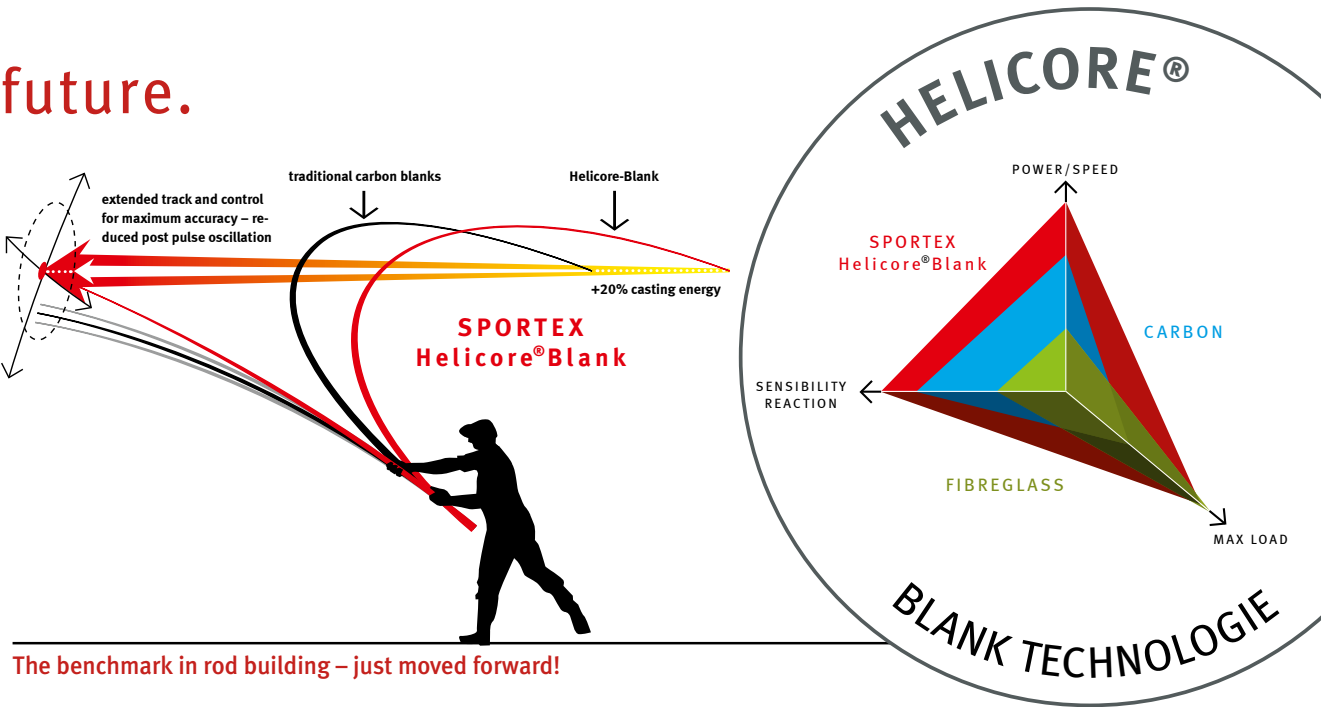

At the heart of every agile SPORTEX fishing rod are the right fibres and the innovative processing under which they go.

We use only the latest and highest quality carbon fibres for our rods, sourced from the leading manufacturers. What makes our knowledge and skills so special is how we achieve the specific mixture of the most varied materials, such as highly modulated carbon fibres, Kevlar, Boron or Zylon, and merge them into a frictional force-closed combination. This enables us to exploit the advantages of the individual fibre materials, such as flexural strength and tensile strength, lightness, impact resistance, speed and resistance to breakage in optimum combinations. And the result? Rods tailored individually to specific types of fishing and angling techniques, with the fast action typical of SPORTEX.

SPORTEX-technology of the future.

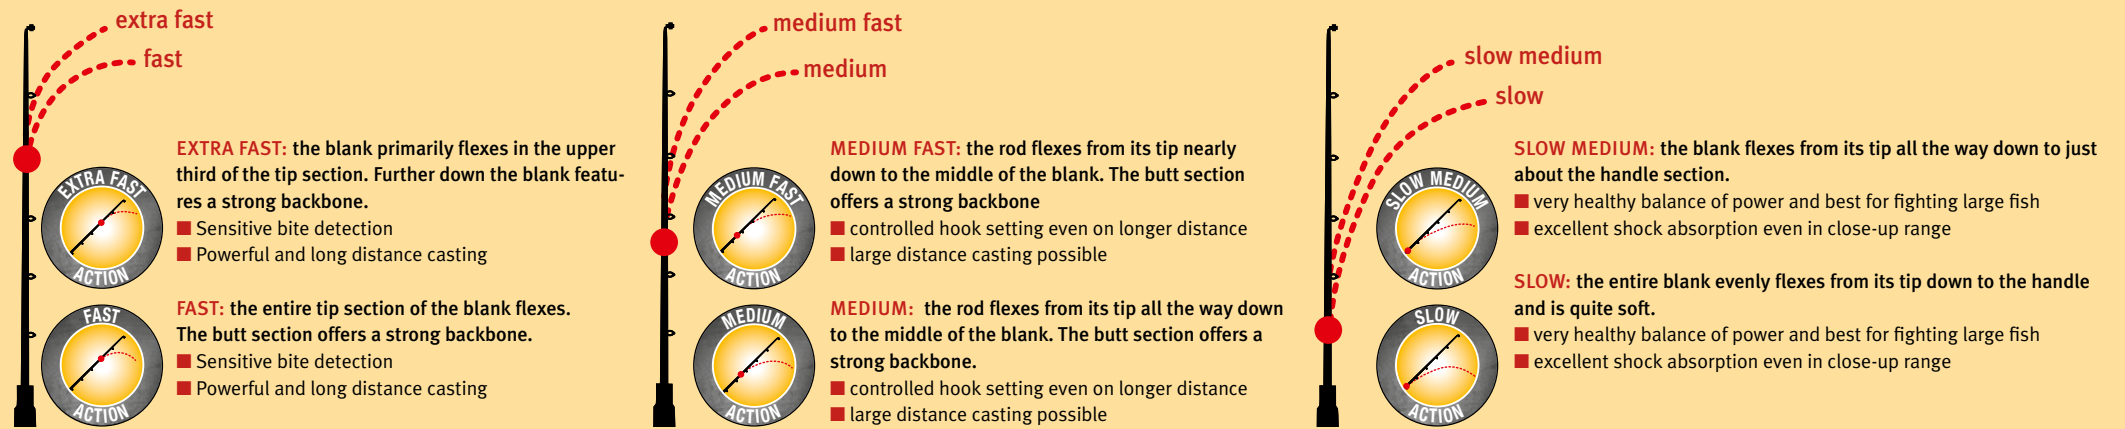

The Sportex Helicore®Blank is a masterpiece in rod building, unifying the best possible features in all disciplines. The new technology is a strict development of **SPORTEX's proprietary HT Cross Winding process**, taking into account the latest in material science and manufacturing technology. The result: incredibly light and fast blanks that are more sensitive but at least as robust, strong and long lasting as millions of fishermen worldwide know it from SPORTEX. It simply fishes better than any other blank used in today's rods.

When casting, you will feel the difference: Post-pulse oscillation is dramatically reduced and the blank loads up to 20% more energy – resulting in longer and more targeted casting.

Rod action

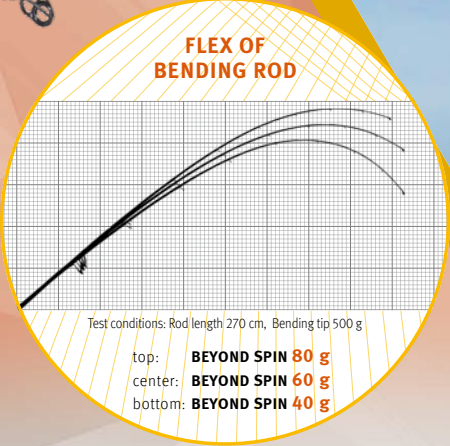

A fast and individually designed rod action to perfectly meet the requirements of a specific angling application is quintessentially to all SPORTEX rods:

SPORTEX BEYOND

AN OUTSTANDING ROD SERIES WITH SUPERLATIVE QUALITIES THROUGHOUT.

BEYOND CARP

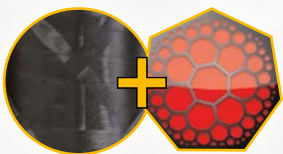

TECHNICAL INFORMATION

The game-changing Heptacore blank is built on T1000 carbon fibres and features a unique profile, which is heptagonal (seven-sided) instead of round like 99.99% of ALL rods. This complex advancement in blank construction represents a quantum leap in rod building and pushes the capacity of carbon beyond what anyone thought possible. Heptacore outperforms common blanks with round profiles by about +20% in casting performance and +15% in power.

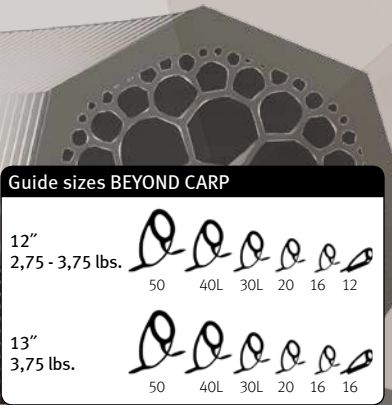

The advantages:

- A healthy margin in casting distance and precision
- Extraordinary sensitivity
- Unknown speed in casting and striking
- Inconceivable power

BEYOND SPIN

The blank has a semi-parabolic action and incredible speed. The unique seven-cornered blank shape means that, when casting, the blank cannot veer to the left or the right. In other words, your bait is always exactly on target. The Beyond Spin also makes no compromises when it comes to staying connected with the bait. Every contact with the bottom, every patch of weed and every bite is passed straight to the angler. These unique rods make for simply sensational fishing.

BEYOND CARP

Nothing surpasses these rods for distance casting. Thanks to the special new design of the blank, casts go further and with less effort. And when playing even the feistiast of fish, the enormous strength reserves that the rod can deploy make themselves felt straight away, making it a whole lot easier to draw fish out of an underwater jungle. This blank also has excellent damping properties that easily deal with getaway attempts and reduce the chance of the hook slipping out.

REVOLT SPIN

Just like their ‘big brothers’ in the BEYOND Spin Series, the Revolt Spin rods feature our trailblazing 7-sided Heptacore blank. They also boast maximum possible speed, optimum loading/acceleration, extraordinarily good sensitivity and enormous reserves of power. Proof that they are genetically the same rods as the Beyond Spin models, only with a different configuration. Revolt Spin rods also feature SIC guides (K-Style), a specially finished FUJII TVS reel seat, a removable FUJII hook keeper, and ergonomically designed Duplon handles. All Seatrout models are fitted with a full-cork handle.

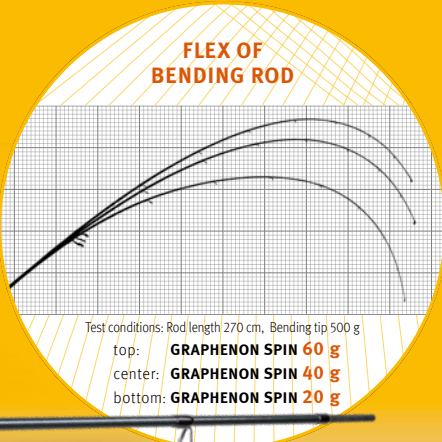

REVOLT CARP

These ‘little brothers’ in the BEYOND Carp Series come with our trail-blazing 7-sided Heptacore blank. How could it be any other way? The Revolt Carp has stand-out charm, with its special blank design, its extraordinary precision when casting and its enormous reserves of strength. The outstanding loading properties of the blank mean that impressive casting distances can be achieved with surprisingly little effort. When it comes to playing the fish, the Revolt Carp makes the absolute most of its brilliant damping properties. On the one hand, it ensures the fish tires rapidly; on the other, it ensures it’s not the one that got away. Genetically, these are the same rods as the BEYOND Carp rods, but with a different configuration. The Revolt Carp comes with slim SIC guides in the KW style, with a 50 butt guide, a specially finished FUJII TVS reel seat, and ergonomically designed Duplon handles. Also available as a Stalker version in 10ft with 2.75lbs or 3lbs tests (with 30 butt guide).

SPORTEX GRAPHENON

THE ULTIMATE POWER COMBINATION OF HIGH-TECH CARBON FIBRES AND GRAPHENE

GRAPHENON SPIN
The lightweight Graphenon Spin offers huge power deployment, good resistance when playing fish and long, precise casting. Add excellent bait 'feel' and sensitivity, together with a progressive action, and these rods make the perfect companion on the water.
The Ultra Light model is specially designed for very small lightweight baits. It comes with a super-sensitive tip that ensures every bite is transferred straight to the handle. The rods in the series are fitted with FUJI-TVS reel seats, FUJI-KL /KT-SIC guides and tough, ergonomically-designed Duplon handles. The Seatrout models are fitted with full cork handles. This is our high-tech premium rod series – and everything you could ask for!

GRAPHENON TRAVEL ULTRA
The Graphenon Travel Ultra breaks down into extra short sections to fit into almost every suitcase, making it perfect for any fishing trip or for anglers on the move carrying just a simple rucksack. Despite the multiple sections, this is a rod with a superb action very similar to the regular spinning rods. When it comes to casting, there's no compromise. When it comes to playing, there's no contest.

GRAPHENON CARP
The Graphenon Carp owes its impressive performance to its enormous power deployment and resistance when playing fish. It's always the rod – not the angler - doing the work. The excellent damping properties of the blank make the fish tire very quickly and reduce the risk of it getting away just short of the landing net. The rod's rapid reset capacity, in combination with great loading dynamics, also allows for very long and precise casting.

GRAPHENON BOAT
This shortened version of the Graphenon Carp is ideally suited for use on boats or in restricted spaces. Despite being short, these rods generate enough power to match any carp, while casting from the bank is simple and stylish.

TECHNICAL INFORMATION

The name gives it away.... alongside carbon, we also use graphene as a major component. Graphene is a carbon modification with a two-dimensional structure. Each carbon atom is surrounded by three others at an angle of 120°, which creates a honeycomb pattern. It has the highest tensile strength of any previously known material (e.g. 125 times higher than steel). The rod blanks contain around 20% graphene, which makes a massive contribution to load capacity, speed and casting performance.

SPINNING RODS

FLEX OF SPORTEX PREDATOR RODS

BENDING ROD TEST:

To visualise the character of each of our rods all blanks are precisely positioned in a measuring device and stress-tested with a uniform weight.

The resulting images are digitally rendered onto a standardised diagram to show the actual flex of each rod. Note that this diagram displays the individual flex of a rod series but not its action (fast, medium fast etc).

Test conditions:

- Rod length 2,70 m
- Cast 40 g
- Bending tip with a weight of 500 g

TIBORON EXTEND
The newly developed blank, based on nano-carbon fibres combined with graphene, forms the core of the TiBoron range. The graphene technology gives the TiBoron immense speed and resilience yet the blank is very light, with exceptional loading properties when it comes to casting. The sensitivity of the blank is everything you could want, sending clear messages from the bait end right into the hands – which, in turn, means maximum control.

The TiBoron Extend and ULR come fitted with an ergonomic 3K carbon handle, while the Classic version has a top quality split-cork handle. Other features include high quality SIC guides, a FUJI TVS reel seat, and a removable FUJI hook keeper. Both Seatrout models have a full-cork handle.
A first class series of rods, for a first class experience on the water. Guaranteed.

SPORTEX AIR SPIN

VERY LIGHT, VERY FAST, VERY FINE: AN EXCLUSIVE SERIES OF RODS

Very light, very fast, very fine: this exclusive series of rods features a combination of exquisite characteristics. At their core is the new Helicore blank, which is designed for maximum lightness. With its composite material of T800 carbon fibres and special epoxy resin with finest nanoparticles, it gives the Air Spin unequalled speed and stability. The ultra-light FUJI TORZITE guides with titanium frames amplify

the feather-weight character and boost casting like no other guide available in the market. Added to this, the extra-ordinary loading capacities of the blanks mean that both, artificial and natural baits can be cast with extreme precision at long distances without any major effort. The sensitive blank provides radar-like control and passes even the slightest of takes right into your handle, whilst retaining unbelievable

strength to handle the most explosive fight with superior ease. These rods – probably the lightest ones available – definitely donate an extraordinary fishing experience. The FUJI reel seats, a distinctive finish with the added touch of special varnish, and the high quality handles made of finest cork (sea trout) or Duplon round these outstanding premium rods off.

The ideal predator rod for the ambitious angler!

ABSOLUT NT

The challenge when developing the new Absolut NT was to revolutionise the excellent Helicore blank of the previous model. We spent a vast amount of time creating an extraordinary blank incorporating the very latest materials and technologies. Nano-carbon fibres were woven in a special process and subjected to enormous pressure, so as to increase the tear resistance of the individual fibres. This in turn enabled us to produce an even more resistant Helicore blank for the Absolut NT. This series is also characterised by its extremely light weight, speed, fine sensitivity and enormous power. Long casts, precise bait guidance, reliable bite indication and consistent striking action all contribute to the rod's excellent performance. Here is the perfect predator rod for anglers who want only the best.

MAGNIFIC FINESSE

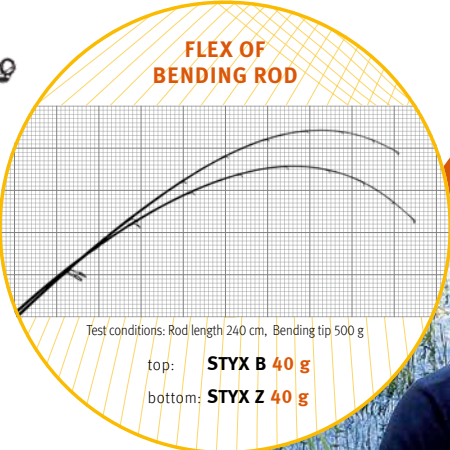

Very light and, above all, very sensitive rods for the widest range of finesse techniques. To make them we use our very latest Helicore blank, with T1100 carbon fibres and special epoxy resin (with the very latest in modern nano-materials). The action of the sensitive tip allows for very fine lines to be used, without any risk of snapping on a strike. The fish can take the bait without any noticeable resistance, which means they suspect nothing. The butt section comes with extra reinforcement in the shape of 4X-Cross technology, which gives the rods enormous power and resilience. The fittings of the Magnific Finesse are pretty spectacular too: FUJI SIC guides, FUJI VSS or ACS reel seats (Baitcast), the very latest D-Style hook keepers from Seaguide, and handles of high quality Duplon material.

SPORTEX STYX²

OUT FISHING ALREADY, OR ARE YOU STILL DREAMING ...

The new STYX2 rods are made to bring your dream fish a whole lot closer. No matter where you are, lake, river or sea, STYX2 will never leave you high and dry. With an extremely light blank and an action that's super-fast and super-strong, you get to enjoy the bite, the lift and the thrill of playing right to the end. The new STYX2 rods, they're a passion...

STYX² T
Your first choice for hunting big predators with modern twitch baits. The blank has the optimum rigidity for seductive lure play and perfect feel. The STYX2 T is available in medium, medium heavy and extra heavy casting weights. There's a baitcast version as well as a fixed spool model, with SIC rings to match.

STYX² B
STYX2 B rods are designed for perch, zander and pike fishing. The first class casting characteristics of the blank cast the bait right to the fish, even at long range. The optimum bait control combined with the sensitivity of the rod make for direct bite detection, right into the handle.

STYX² V
Light and finely balanced vertical rod for fatigue-free fishing, with a sensitive tip and powerful backbone. With the STYX2 V, precise presentation of the lure becomes child's play and bites are easily detected thanks to direct contact with the bait. The STYX2 V is available in medium and extra heavy casting weights. The rods are available in both baitcast and fixed spool versions, with SIC rings to match.

STYX² Z
Rods specially designed for zander. STYX2 Z models are ideal for fishing with both artificial and natural baits. The tip is extremely sensitive and extremely fast, and combined with the powerful backbone, instantly and reliably sets the hook. The gentle flex of the blank provides perfect shock absorption in fights with strong fish, meaning fewer get away when being played.

SPORTEX CARAT SPECIAL XT

PURE PERFORMANCE!

CARAT SPECIAL XT
The new Carat Special XT series features a modern, fast and powerful Helicore blank made of T700 carbon fibres with nanotechnology. Particularly noteworthy are the excellent loading properties, the especially fine sensitivity and the balanced strength of the blank. These factors allow for long, precise casts, help in ensuring perfect bait control, and make for complete command of the fish after the bite. The sensitive tip passes every contact with a fish right into the handle.

The rods have a dynamic semi-parabolic action, fitting easily and comfortably in the hand. The Carat Spezial series comes with original FUJI Alconite guides, a FUJI VSS reel seat and hard-wearing Duplon handles. The Seatrout rods have a cork handle. All round, this is an excellent series of rods, ideal for small and larger predators alike.

CARAT SPECIAL XT ULR
The Carat Special XT Ultra-Light model comes with an extremely sensitive and flexible tip, transmitting even the most cautious bite and allowing the fish to take the bait without any noticeable resistance.

SPORTEX BLACK ARROW G2

BLACK ARROW G2

BLACK ARROW G2 ULTRA LIGHT

BLACK ARROW G2

The Black Arrow Series has been completely upgraded and now combines a stylish appearance with high-tech blank material, especially matched to the challenges of modern spin fishing. Thanks to the use of Japanese high-performance carbon, we have been able to boost the speed and sensitivity of the blank compared to its predecessor. The rods are very slim, but when you are playing a fish, they provide enormous strength, and even the fiercest trophy fish can rapidly be brought to heel. Also, the fast recovery of the blank makes for long and precise casting. The Ultra-Light model, with its newly developed and enormously sensitive tip, is ideally suited for use with small and very light lures for perch, trout and zander.

SPORTEX CAPTOR SPIN

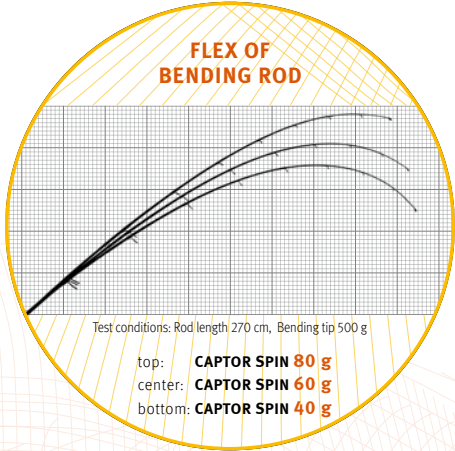

THE CLASSY ROD SERIES FOR PREDATORS!

CAPTOR SPIN

The new eye-catching Captor Spin series is built on a striking, slim high-speed blank made from Japanese high-modulus-carbon. Designed for perch, trout, pike and zander, these rods feature amazing sensitivity and excellent casting qualities. The tip is designed to transmit every nibble with total reliability and, by dampening every attempt to escape, significantly reduces the number of lost fish.

Thanks to the progressive deployment of strength in the semi-parabolic action, the blank always provides the power needed to keep the fish on the hook and safely under control when it is being played. The cast, the feel of the bait sinking and then the ‘plunk’ when the bait hits the bottom, are all clearly felt back in the handle section.

SPORTEX HYDRA SPEED

SPEED AND STRENGTH...

HYDRA SPEED

HYDRA SPEED BAITCAST

HYDRA SPEED SEACAST

HYDRA SPEED

Speed and strength are the hallmarks of this new series. The rods feature an extremely fast action matched with a powerful backbone. The blank, made from high-performance carbon, delivers low weight and great sensitivity. The rods also feature excellent loading and reset capacity, which produce really long casts with spot-on accuracy. The lightweight blank also allows for

hours of casting with no strain and plenty of gain. The rods come fitted with SIC guides, a tough VSS reel seat and top quality Duple handles. Depending on the model, this universal rod series is ideally suited for spinning, twitching, jigging, trolling, and, of course, regular angling.

HYDRA SPEED SEACAST

Our two new models for spin fishing in the sea. These rods have a similar action to the classic HYDRA Speed, but have been upgraded with optimised fittings. Among the stand-out features, the rods have been modified from a middle division to an Uptide division behind the handle. The front handle has been lengthened by 8cm and the back by 3cm and larger guides have been fitted, to allow you to cast even further.

SPORTEX CURVE SPIN

LIGHTWEIGHT ROD SERIES WITH FANTASTIC ACTION!

CURVE SPIN

This newly developed all-round spinning rod series with a parabolic action right into the handle makes playing fish a pure pleasure. A special production technique has allowed us to fit the Curve Spin series with a blank that is very light and slim, but with exceptional loading capabilities. During development, particular attention was paid to the sensitivity and the damping characteristics of the blank. This means that even the most cautious nibbles are pas-

sed to the handle, and those fish that do get away are reduced to a few lucky (or unlucky) exceptions. Thanks to its low weight, the Curve Spin lies perfectly balanced in the hand and allows for long hours of casting with no feelings of fatigue. The rods come fitted with full Duplon handles, aluminium hoods, top quality SIC guides from Seaguide and VSS reel seats. The series has an excellent price-performance ratio.

SPORTEX BASSISTA

PLAYING THE FISH IS ALL IN THE GAME!

BASSISTA FINESSE/
BASSISTA DROPSHOT

BASSISTA VERTICAL

BASSISTA VERTICAL INLINER

BASSISTA JERK

BASSISTA FINESSE
This modern rod series has been created for finesse fishing with small wobblers, soft baits, micro-jigs etc. The blank, made of Japanese high-performance carbon with X4-Cross technology, makes its presence felt with superb high sensitivity, speed and enormous reserves of power. These rods make correct bait presentation easy.

BASSISTA DROP SHOT
The Dropshot Series also has a Japanese high-performance carbon blank with X4-Cross technology, providing truly impressive sensitivity, speed and enormous power reserves. The very fine and flexible tip reliably signals even the most tentative nibble, allowing the fish to take the bait without resistance. The action is specially matched to suit all kinds of dropshot applications. The backbone can be relied upon to land even the best trophy fish.

BASSISTA VERTICAL
The Japanese high-performance carbon blank with X4-Cross technology and superb sensitivity allows for optimum bait delivery and direct bite recognition when vertical fishing. The powerful spine allows for rapid, direct striking and makes it hard for the fish to escape the hook. Components include FUJI F-type KW guides, FUJI ACS-16 baitcast reel seats and durable Duplon handles.

BASSISTA VERTICAL INLINER
Inliner rod for vertical fishing for perch, zander and other species. The advantage of inline rods is that, because there are no guides and the line runs through the interior, the blank bends noticeably more uniformly under loading, which means more fun when playing the fish. There is also reduced risk under full loading of a guide frame getting pressed into the blank and causing the rod to break. The action of the rod is slightly more “parabolic” compared to the Bassista Vertical.

BASSISTA JERK
Stiff, lightweight jerk rods, made of Japanese high-performance carbon, with a fast and hard rod tip. Perfect for the controlled, speeded-up retrieve of small and large jerk baits. The stiff backbone provides sufficient power to get the better of the biggest pike. Components include FUJI F-type KW guides, FUJI ACS-17 baitcast reel seats and durable Duplon handles.

NOVA TWITCH

The new NOVA Twitch series comprises very light and fast rods for finesse fishing for trout, perch and zander. The use of top quality, high-performance carbon from Japan gives the blank enormous speed and extreme lightness. They have highly sensitive and fast tips, which relay even the lightest bites directly to the handle. The semi-parabolic action gives the rods the backbone to apply all the pressure needed, even on bigger fish. The NOVA Twitch has an excellent price-performance ratio and is the ideal rod for use with modern baits for twitching.

NOVA TWITCH HEAVY

A lightweight and rigid rod designed for fishing with large baits for pike and similar fish. The rod has a very fast and very sensitive action, which means that when a bite happens the strike can be made straight away, and absolutely on target. The superior loading properties of the blank also mean that heavy baits can be cast extremely well. There are two different versions of the Nova Twitch Heavy available, one with a trigger handle for using a baitcast reel and SIC Lowrider guides, the other with a fixed spool reel holder and KL style guides.

NOVA ULTRA LIGHT

Very fine and extremely sensitive rods with a fitted tip made of full carbon, for use with small and very light baits for perch, trout, and zander. The NOVA ULR is available in 185cm and 200cm versions with casting weights of 1-5g and 2-9g.

NOVA DROPSHOT
These dropshot rods are designed especially for use with smaller modern artificial baits. The extremely sensitive rod tip allows for the bait to be guided under the water with perfect results, and for the fish to take it without any noticeable resistance. And the backbone has been designed with enough strength to easily deal with bigger fish.

NOVA VERTICAL
Rods designed for vertical fishing from a boat. These rods make for perfect control of the bait close to the bottom. The fast blank with its very sensitive tip flags up every bite absolutely without fail, and allows for the fish and the bait to be drawn in without any serious resistance. The rods also have a powerful backbone, meaning that enough pressure can be built up to handle even big fighters.

NOVA JERK
Lightweight rigid jerk rods for rapid flicks of small and large jerk baits. Thanks to the special Uptide arrangement, the Nova Jerk has an almost continuous action, which makes for perfect bait control. The rods are fitted with a trigger handle for using a baitcast reel and SIC Lowrider guides for added smoothness.

BLACK PEARL GT-3
A modern, elegant look, more speed and strength, more sensitivity, and even better recovery: that's the new Black Pearl!
The rods' action has been designed especially with predator fishing in mind. In order to achieve the best possible casting performance, we have used high-modulus Japanese carbon for the blank. It means we have been able to make the rods even slimmer and faster, but without detracting from the blank's resilience. What's more, the butt section has been reinforced with a 4K carbon mesh fabric, which means that you can exert even more pressure when playing a fish. The Black Pearl GT-3 comes fitted with slim SIC guides, DPS or ECS (Baitcast) reel seats, and high quality Duplon handles.
A perfect series when on the hunt for perch, trout, zander, pike and similar species. Also available as travel and ultra-light versions.

SPORTEX PHENOMEN NEW

PHENOMEN SPIN

PHENOMEN SPIN

A completely new spinning rod series with a semi-parabolic action and made of Japanese high-performance carbon. These rods are perfect for using with blinkers, wobblers, spinners, soft baits and other lures. And, of course, we took great care to give the blank an extremely good casting performance and plenty of backbone for a really penetrating strike. That's why the butt section has been specially reinforced with 3K carbon mesh fabric. The shock-absorbing properties and sensitivity of the blank are all any angler could ask for. The Phenomen Spin comes with slim SIC guides from Seaguide, an SKS-style reel seat, and a handle of hard-wearing HYBRID cork.

GODSPEED SPIN

Our Sportex “70th Anniversary edition” rods, with an excellent price-performance ratio. The Godspeed Spin is a series for the modern predator angler using blinkers, wobblers or soft lures for perch, zander and pike. The 100% high-modulus, carbon fibre blank has a semi-parabolic action with a fast and sensitive tip for perfect bait presentation and fast strikes. The rods sit comfortably in the hand for hours of fatigue-free fishing. Equipped with a VSS-reel seat, SIC guides and robust duplon handles.

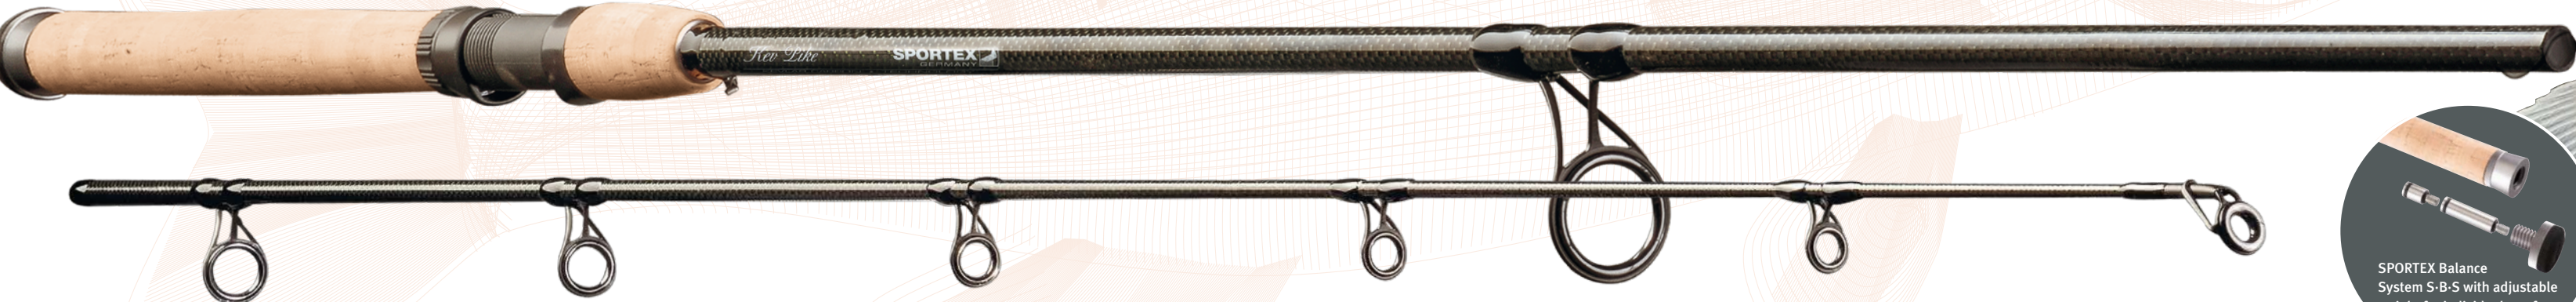

SPORTEX YOUNGSTAR NT NEW

THE „FIRST“ FOR THE YOUNGER GENERATION

SPORTEX KEVLAR

YOUNGSTAR
The popular SPORTEX entry-level rod for the next generation. These spin rods have been developed especially for young anglers. To make overall handling easier, the back handle has been made shorter and a smaller reel seat put in place. And a lower proportion of glass in the high-modulus carbon provides the blank with higher resilience. The Youngstar boasts lightness, speed and toughness. And while it meets all their particular requirements of young anglers, it's also great for adults going after perch, trout etc.

KEVLAR
These high-quality, almost unbreakable rods have been synonymous for years with lightness, stability and strength. Thanks to over 30 years of experience in the building of Kevlar rods, with this rod series we were able to optimally combine the lightness and breaking strength of Kevlar with the resilience and rigidity of carbon fibres. This material mix is made up of 50% Kevlar and 50% high-quality HM carbon fibres and makes for extremely light blanks with a strong spine. The organic action curve from the butt to the tip provides accurate casting and controlled playing with the fish, both close at hand and further away. The special feature of this rod series is the extreme conductivity of movement impulses. Its fittings with the finest cork, Fuji SIC guides as well as Fuji reel seats make this rod a highlight for every set of angling equipment.

SPORTEX HUCHEN DE LUX XT

HUCHEN DE LUX

SPORTEX SALMON DE LUX

SALMON DE LUX
A four-section giant salmon rod, complete with tried and trusted SPORTEX HT cross-winding technology. The blank is made of several parts, but high-modulus carbon gives it the strength to deal with any salmon or taimen. Thanks to its semi-parabolic action, the Salmon de Lux has plenty of power in reserve to confidently bring even bigger fish out of the current and into the landing net. This all-rounder, with its typical fast SPORTEX action, can be used for spin fishing as well as bottom fishing. The rods come with durable SIC guides, DPS reel seats and high quality natural cork handles.

HUCHEN DE LUX
The blank incorporates the tried and trusted SPORTEX HT cross-winding technology, which provides improved stability and rapid reset performance. The rods are fitted with best quality, natural cork handles, along with extra large and stable guides that prevent problems with ring icing in the winter. The tip action

allows for controlled bait presentation in the current, as well as penetrating strikes into the very hard mouths of Danube salmon. Thanks to the weight integrated in the handle section, the rod is perfectly balanced and easy to handle. The rod can also be used for heavy pike.

SPORTEX AVON DE LUX

AVON DE LUX
This series of rods is great for all-round float and bottom fishing. Avon rods are intended for use in still and running water, for predator and prey fish alike. They offer excellent performance when after pike or zander with dead baits, or when fishing with fixed lead rigs or swim feeders for feisty barbel. The almost parabolic blank has a powerful backbone and a sensitive fast tip, which makes for a penetrating strike and secure hooking. The rods come with a natural cork handle, FUJI DPS reel seats, stable SIC guides and aluminium hoods. A rod series for anyone looking for maximum flexibility on the water.

GRAPHENON TRAVEL ULTRA

GRAPHENON TRAVEL ULTRA

The Graphenon Travel Ultra breaks down into extra short sections to fit into almost every suitcase, making it perfect for any fishing trip or for anglers on the move carrying just a simple rucksack. Despite the multiple sections, this is a rod with a superb action very similar to the regular spinning rods. When it comes to casting, there's no compromise. When it comes to playing, there's no contest. Further information on Graphenon can be found on page 10–11.

BLACK PEARL GT-3 TRAVEL **NEW**

with rod pipe
(Rod pipe length = 66 cm)

CARAT SPECIAL XT TRAVEL

with rod pipe
(Rod pipe length = 74 cm)

BLACK PEARL TRAVEL

The ideal rods in case of very limited space. With 5 sections, it is perfect for any rucksack or suitcase and shows a great performance as well as great power reserves while spin- or bottom fishing. The action is very harmonic and guarantees a lot of fun at rivers, lakes or sea. It comes in a quality hard case cordura tube! Both models are available in 2,70 m with 60 g or 80 g casting weight. Further information on Black Pearl can be found on page 40–41.

CARAT SPECIAL XT TRAVEL

These short-sectioned travel rods are the perfect companion for your travel plans. The clue: The Carat travel rods can be fished in two length – 2,40 m with 4 sections and 3,00m with 5 sections! This great feature – for example using from shore and boat – has no influence on the remarkable action of the blank. Whether ab-road or at home, this rod offers you the best for every situation. Using the Helicore-Blank technology, the rod has great power reserves to reliably reel in unexpected big catches. The Carat Travel is available in 50 g and 70 g casting weights. Further information on Carat Special XT can be found on page 24–25.

NOVA TRAVEL

all Nova rods are with rod case
(Rod case length= 77 cm)

NOVA ULTRA LIGHT TRAVEL **NEW**

NOVA JERK TRAVEL **NEW**

NOVA TRAVEL

Four-part travelling rod for your fishing holiday or alternatively for carrying on a two-wheeler to your favourite local fishing spot. The Nova Travel is a fast all-round rod, for lightweight to medium fishing with artificial and natural baits. The rod has a semi-parabolic action, ensuring optimum force distribution over the entire blank and allowing for really excellent casting distances. The rods are available in a length of 240cm, with a casting weight of 20g or 40g. Further information on Nova can be found on page 36–39.

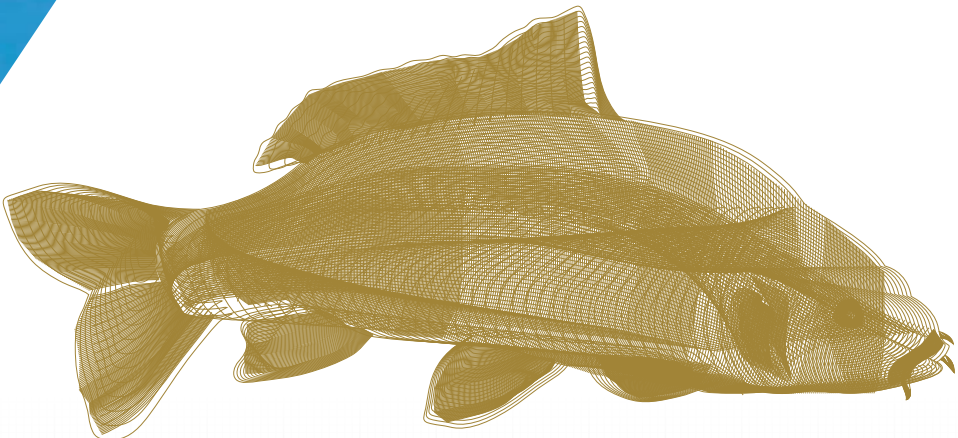

NOVA JERK TRAVEL

A four-part, light but tough jerk rod for use when on the move on the water. The slim blank with its very fast and rigid rod tip allows for controlled lively strikes with medium and smaller jerkbaits. And the short travel length of only 49cm means this is a rod that fits easily in any backpack or carrying case.

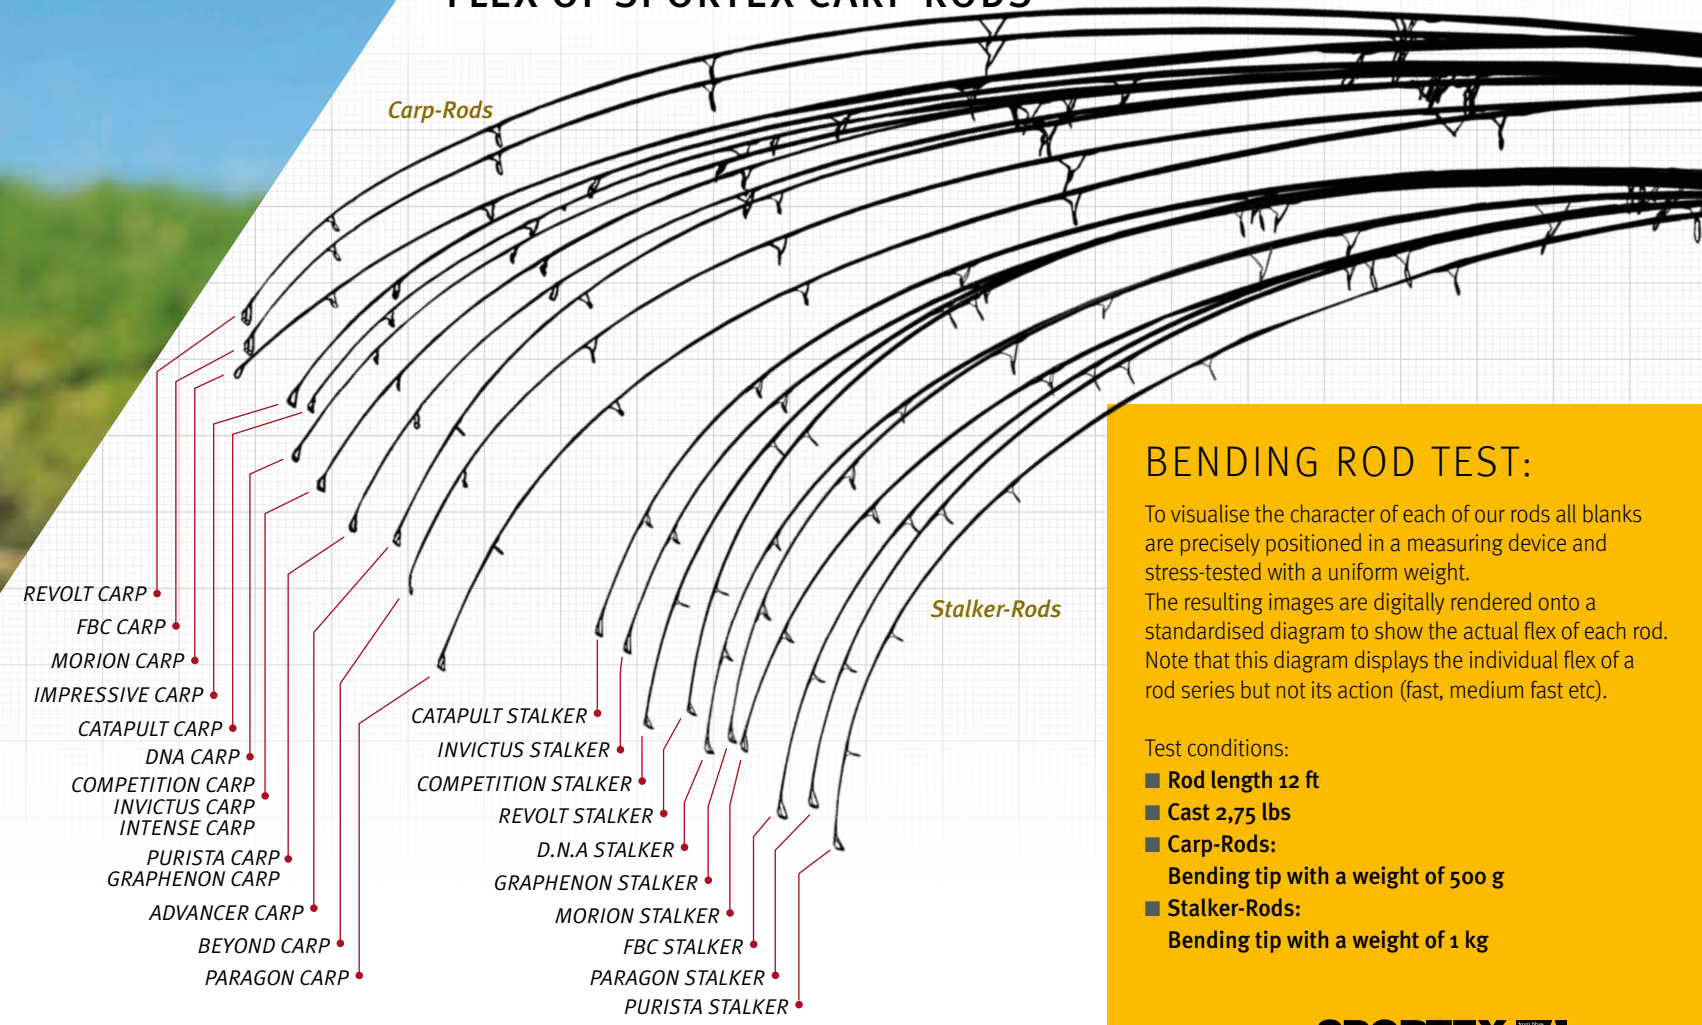

NOVA ULTRA LIGHT TRAVEL

Very light and slim four-piece or five-piece travel rod for ultra-light fishing. The rods have the same action as the two-piece NOVA ULR models. Perfect for holiday trips and easy to carry when riding a bicycle.

CARP RODS

FLEX OF SPORTEX CARP RODS

BENDING ROD TEST:

To visualise the character of each of our rods all blanks are precisely positioned in a measuring device and stress-tested with a uniform weight. The resulting images are digitally rendered onto a standardised diagram to show the actual flex of each rod. Note that this diagram displays the individual flex of a rod series but not its action (fast, medium fast etc).

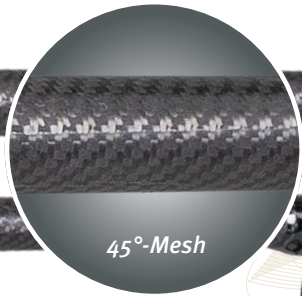

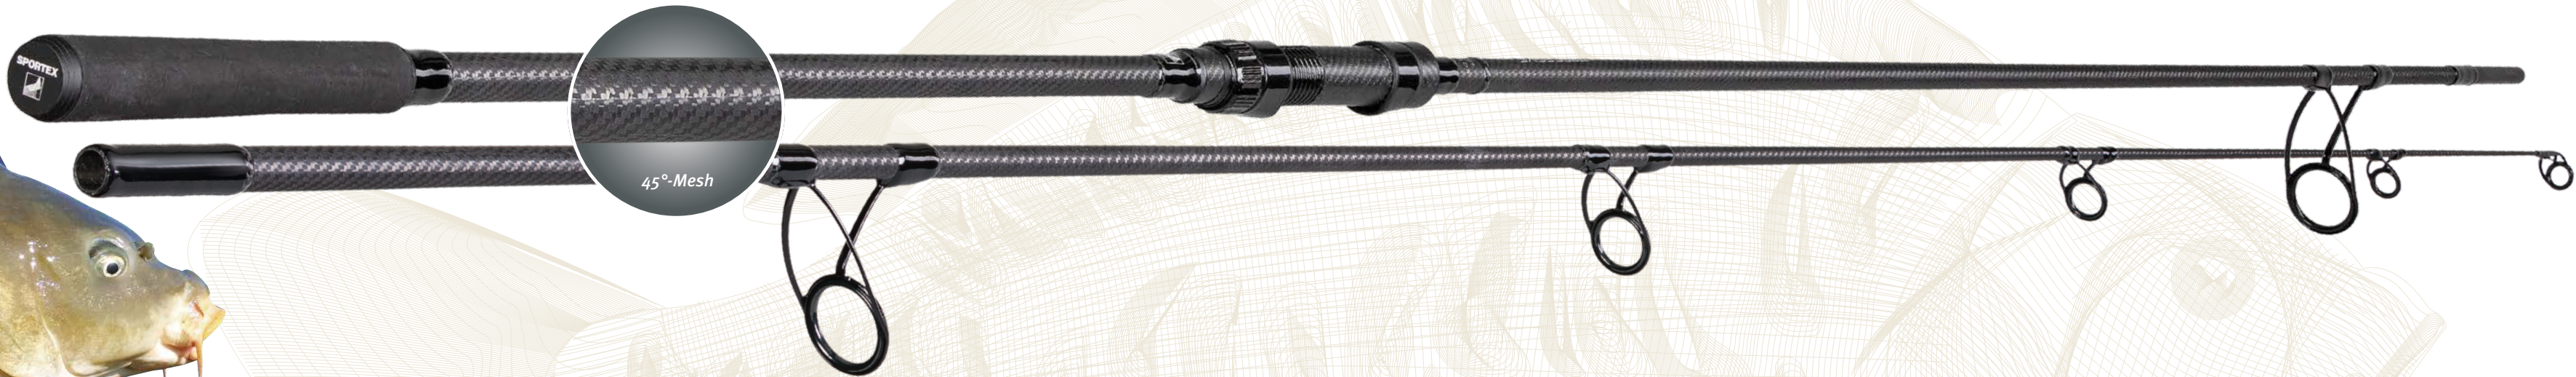

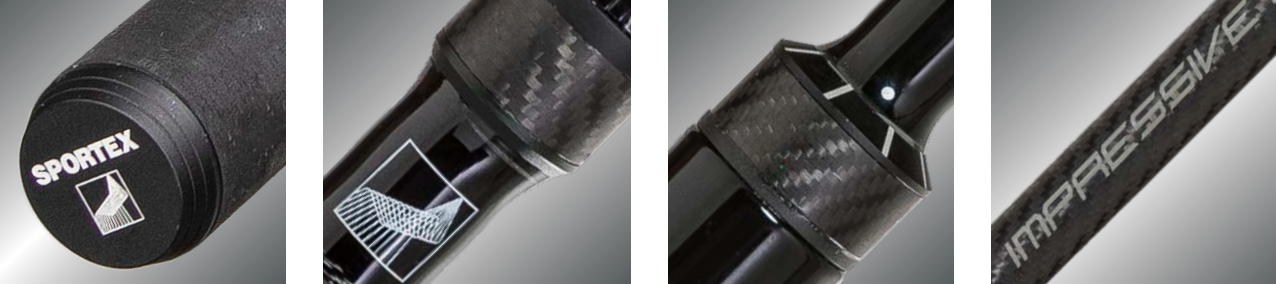

Test conditions:

- Rod length 12 ft
- Cast 2,75 lbs
- Carp-Rods:
Bending tip with a weight of 500 g
- Stalker-Rods:
Bending tip with a weight of 1 kg

SPORTEX IMPRESSIVE CARP

EXCELLENT CARP ROD SERIES WITH THAT CERTAIN SOMETHING!

IMPRESSIVE CARP

These rods use the highest quality Japanese carbon fibres with enormous tensile strength. This gives the blank even higher loading capacity and more speed. The whole assembly is made even stronger thanks to the special arrangement of the carbon fibres at a 45° angle. These properties ensure an outstanding performance in making long, precise casts. The Impressive Carp also has a

semi-parabolic action with progressive power distribution, giving it very good playing characteristics. The series is fitted with a FUJI DPS reel seat, high quality FUJI Alconite K long-cast guide arrangement and shrink wrap split handle. The continuous matt carbon finish at a 45° angle also provides that special 'look'.

INTENSE CARP
Looking at the blank, the first thing you notice is the unique X5 cross-carbon material in the Ghost design. Depending on how the light falls on the blank, this is visible or invisible. The special braiding of the individual carbon fibres gives this blank about 25% more strength and stability in relation to comparable blanks. The special epoxy resin with extremely fine nanoparticles also increases the speed of the blank as well as making it lighter. These hugely advantageous characteristics are particularly noticeable when casting. The blank is the ultimate loading machine and fires the rig precisely into

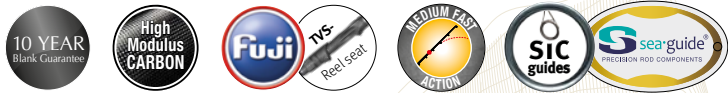

the feeding area over long distances and at enormous speed. The combination of a 'softer' tip and a powerful backbone makes for optimum control when playing a fish. The Intense Carp fittings include a FUJI DPS double-hood reel seat, which makes for a better balanced rod by allowing the reel to be positioned further forwards, or, if the need arises, further back. The FUJI SIC K long-cast guides boast an anti-tangle design for perfectly smooth line running. The exclusive surface design of the rod perfectly rounds off its stylish appearance.

SPORTEX PURISTA

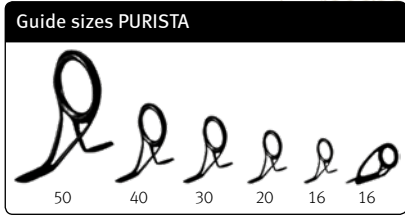

PERFECT BALANCE,
FULL POWER!

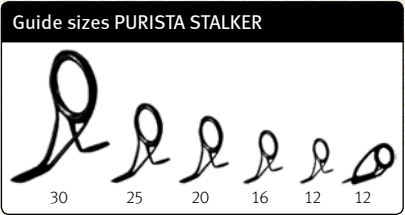

PURISTA

PURISTA STALKER

PURISTA
Let's cast! The Purista is another advanced development in casting machines from SPORTEX. This series uses a dynamic blank made from the best high modulus carbon fibre. It has fantastic tensile strength and unbeatable properties such as perfect loading behaviour, rapid reset capacity and a powerful backbone, which combine to land the lead and bait right on target even at long distances. With these rods, casting is nothing but fun! And thanks to the optimum force distribution over the entire blank, there is always enough power available to guide even the biggest catches safely to the net. The lacquered 1K mesh surface finish, in combination with the slim FUJI TVS reel seat, gives the rod that special purist look.

PURISTA STALKER
We had so many enquiries about shorter rods in the Purista series, we decided to create two Stalker versions. Of course, we use the same blank for the Stalker models, and the same fittings as for the 12ft and 13ft models. The only change has been replacing the Duplon split handle with a full cork handle. The rods are ideally suited for accuracy from a boat, making them perfect for anglers who like getting out and about on the water or fishing in very tight spaces. The special damping qualities of the rod tire fish rapidly, as well as reducing the number of getaways.

FBC STALKER

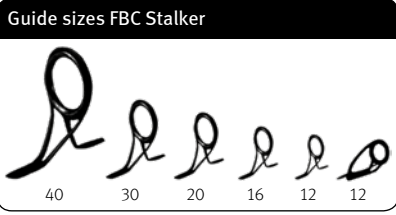

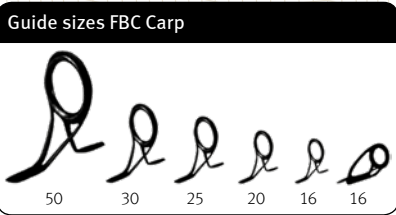

FBC CARP

FBC
The extremely successful and popular ‘old’ FBC series of rods have caught thousands of carp all over the world, but now it’s time to give them a complete upgrade. Certainly a rod like this carries obligations, and that’s why the new FBC Carp rods are so impressive with their elegant finish and enormous action, which they draw from our pioneering new Helicore blank on a nano base. When the blank is manufactured, a special resin is used, which is mixed with minute nanoparticles. These tiny particles bond the carbon fibres almost entirely free of any gaps, which leads to an almost 30% higher loading capacity of the blank. This blank technology has previously only been used among SPORTEX carp rods in the ONE Series.

The perfect loading properties of the lightweight blank allow for long, precise casts, which means that even spots at long distances can be reached with minimal effort. As well as this, the Helicore blank has extremely good damping properties, which help to reduce loss of fish over the last few metres of play. The progressive power transmission of the semi-parabolic blank gives the rod more than enough power to keep the fish away from obstacles and cause it to tire rapidly when being played. All FBC models are provided with a very light but stable reel seat made of aluminium, top-quality SIC guides and slim Duplon handles.

SPORTEX MORION ST

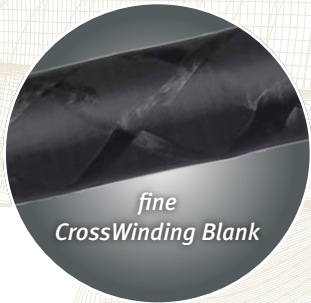

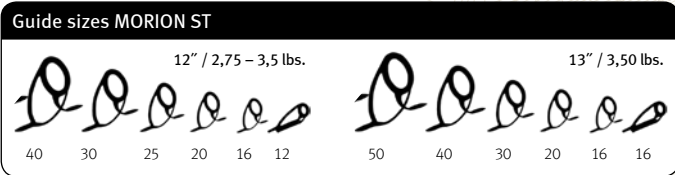

WITH MORION ST RODS, YOU ARE WELL PREPARED AT EVERY WATER!

MORION ST STALKER

MORION ST

MORION ST

One of the most popular carp rods in our range has had a total makeover. Like its predecessor, the Morion is built on a beautiful, slim and lightning fast blank. The tried and trusted SPORTEX HT-Cross Winding technology also makes the blank even tougher and gives it a really powerful action. Thanks to the excellent casting and damping characteristics of this rod serie long casts, right where you want them, are no problem. And the chances of fish getting away when being played are minimal. The new Morion Carp is the best weapon for any body of water.

MORION ST STALKER

The Morion Stalker is built on the same blank as the Morion Carp, but has a slim cork handle instead of Duplon. The rod lengths have been adjusted so that you can fish with no trouble at all in restricted spaces or from a boat – and with the best possible results. Despite being short, the Morion Stalker allows for excellent casting and deploys its full power to rapidly tire a fighting carp.

SPORTEX D.N.A. CARP

FOR ANGLERS WITH CARPING IN THEIR GENES.

D.N.A. CARP / D.N.A. CARP STALKER / D.N.A. CARP SPOD
For the blank of the DNA Carp, we have used Japanese high-performance carbon, which gives the rods an enormously fast reset capacity, meaning excellent casting distances with absolute precision. The semi-parabolic action with progressive force distribution always provides the power needed, even when playing the biggest fish in the most testing situations. Of course, the rods also have very good shock absorption, which provides a buffer against fast attempts to get away and minimises lost fish. The DNA series come with FUJI long-cast K-rings, which prevent any tangling of the line around the guides, and a FUJI DPS reel seat. DNA Carp rods are available either with a 'shrink wrap' split handle, or, for fans of classic design, a full cork handle. A matt 1K mesh surface finish gives the rods an extra touch of elegance on the rod pod.

INVICTUS CARP

The new Invictus Carp series meets all the demands of the modern carp angler. Made of Japanese high-performance carbon with HT cross-winding technology, these rods generate enormous backbone strength, yet the rod tip is still highly sensitive. The Fuji TVS reel seat with its discreet logo and fine finish is a real eye-catcher. All the rods come with SIC slim guides with a 50 butt guide. The Boat version is

fitted with a 30 butt guide. The section of the handle behind the reel seat is designed to be extra slim. The rod is a real casting machine, without being hard at the tip. It’s a slim, lightweight rod for a wide range of uses. The Series is available in 12ft (2.75lbs, 3lbs, 3.25lbs and 3.75lbs) and 13ft (3.75lbs and 5.75lbs Spod). There are also two boat rods in a 10ft length (2.75lbs and 3lbs).

SPORTEX CATAPULT CS-3

PURE POWER FOR EXTRA RANGE!

CATAPULT CS-3 CARP

CATAPULT CS-3 MARKER

CATAPULT CS-3 CARP

The first choice when you need to fish over longer distances, this series uses Japanese high-performance carbon. This provides fantastic acceleration and power in the blank – both essential and decisive when it comes to making long casts. Particular attention was paid during the development phase to ensuring that the semi-parabolic blank reliably dampens down a fish's frantic attempts to escape. A top quality, slim K-style SIC guide arrangement, with a 50 start guide, means that all the rods have a smooth line run-through, reducing the risk of tangles when casting.

CATAPULT CS-3 STALKER

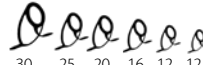

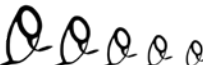

The short version of the Catapult CS-3 Carp rods, these models are perfect for using on boats or for stalking fish on the move. Despite being short, the rods have excellent damping properties and all the power needed to get big fish safely into the net.

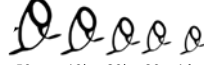

CATAPULT CS-3 SPOD

A spod rod made from Japanese high-performance carbon with plenty of power to deliver enough feed in big rocket feeders right where it's wanted. Ideal for use on bodies of water where it is only possible to fish from the bank and the spod is lying at a distance.

CATAPULT CS-3 MARKER

A practical tool for getting information about the conditions at the bottom of a body of water. The sensitive blank reliably conveys the contours of different bottom structures right into the handle. To get even more information, simply fit a sensor lead or marker.

OLD SCHOOL MEETS MODERN.

PARAGON CARP

Our new Paragon Carp series comes with a classic parabolic rod action. The blank, boasting our tried and trusted SPORTEX HT cross-winding technology, provides perfect feel, right into the handle, and makes for fantastic fun when playing a tough fighter. Other noteworthy features are the excellent shock absorbing properties, which mean that the risk of a fish slipping away at the landing net is very slight. The Paragon Carp also handles wild thrashing movements with ease, buffering them very effectively.

PARAGON CARP "OLD SCHOOL"

Rods with the same blank and action as the Paragon Carp. 'Old School' rods differ only in having cork handles.

PARAGON FLOAT

The new Paragon Float rods are ideally suited for fishing with floats or bread scraps, particularly in summer when the carp like coming to the surface.

PARAGON POWER FLOAT

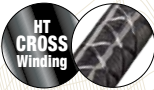

The Paragon Power Float is based on the Paragon Float but has modified fittings. These include a new guide set (Seaguide XQG), a FUJI-VSS reel seat and a full-length Duplon handle. The action corresponds to the Paragon Float (with cork split handle).

PARAGON SPOD

A powerful spod rod for the precise delivery of large bait-filled rockets. Thanks to the very good loading properties of the blank, the Paragon Spod places the spod mix right on target at long distances, without any great effort. The perfect rod for waters where boats cannot be used for feeding. The rod also has a 50 start guide and a 20mm DPS reel seat for seating large reels easily.

SPORTEX COMPETITION CS-4

NEW

COMPETITION CARP CS-4

COMPETITION CS-4 STALKER

COMPETITION CARP CS-4

The ever popular carp rod series has been given a complete makeover, with a blank made using a new Japanese high-modulus carbon. The butt section in particular has been reinforced with our tried and trusted HT cross-winding technology. This provides the rods with even more speed, strength and resilience. The blank still features a semi-parabolic action, with a tough backbone and exceptional damping properties. It's a perfect combination to tire out carp quickly if they put up a fight. The Competition Carp CS-4 Series comes with slim SIC guides (type 50 butt guide), DPS reel seats, and hard-wearing Duplon handles. The Stalker Version (type 30 butt guide) is available in 10ft with 2.75 or 3lbs.

COMPETITION CARP CS-4 (3-PART)

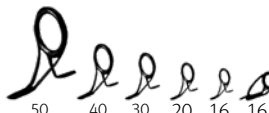

The three-piece versions of the Competition Carp CS-4 come with the same fittings as the two-part version. Even the action is close on identical. Ideal for when you're travelling and short on space.

COMPETITION SPOD CS-4

The perfect choice for when you need to cast bait out over a considerable distance. The rod's powerful backbone, combined with its large guides, means that any feed package can be launched successfully.

TOURON CARP

The Touron Carp Series are four-piece rods ideal for carrying in a backpack or a small case. But despite the multiple sections, there really is nothing to differentiate between their action and that of a two-piece rod. They have comparable casting and damping properties, and they also have plenty of power reserves in the spine. Another special feature is that you can fish the Touron Carp in two different lengths. The 12ft model, if the last part but one is removed, can also be used as a 9ft stalker/boat rod. The 13ft model can be used as a 10ft version. It means you have two rods in one. The rods have slim SIC guides from Seaguide (butt guide size 50), a full EVA handle and FUJI DPS reel seat.

TRIUMPH CARP

The right rods for the job when long casting is the order of the day. We developed these rods in co-operation with our partners in Eastern Europe where fishing from boats is largely prohibited. With the most productive spots often a long way out, rods with a lot of casting strength are needed. Every metre counts. The same goes for international competitions. The Triumph Carp series meets these requirements with flying colours. The blank, of Japanese high-performance carbon, has enormous power in the spine; and the tip has sufficient damping properties to ensure the fish you're playing with doesn't easily get away. Casting tests up to now have achieved distances of up to 220 metres. The rods are fitted with SIC "K-Style" guides (butt guide size 50), a FUJI DPS reel seat and tough Duplon handles. A semi-transparent 1K mesh surface finish gives a superb appearance to the blank.

SPORTEX ADVANCER CARP

ADVANCER CARP

ADVANCER CARP
Our Sportex “70th Anniversary edition” rods, with an excellent price-performance ratio. Top performance carp rods made of high-modulus carbon with a semi-parabolic action. As usual with SPORTEX rods, the Advancer Carp has outstanding casting properties and a powerful backbone to soak up the power at critical moments. The excellent damping properties of the blank also minimise the chances of fish escaping. Equipped with robust SIC guides and duplon handles and a DPS-Reel seat.

LANDING NET

LANDING NET

The brand new landing net features frames of 42" (107cm x 107cm) and 50" (127cm x 127cm) build from extra light weight carbon arms and a break-proof spreader block made from tempered, glass reinforced Nylon. The fast drying and comfortably soft mesh completes this Sportex like premium set of Carp products.

MORION LANDING NET

This 1.8m landing net is made using the same carbon material and design as the blank on our much-loved Morion rods. It is available either as a one-piece design, or two-piece with a special quick lock arrangement. This means that the net can be rapidly taken apart for easy handling, for example for use in the boat after landing. The English thread arrangement also means that the net can be easily fitted with a scoop, for example.

CATFISH RODS

SPORTEX TEAM WALLER Z

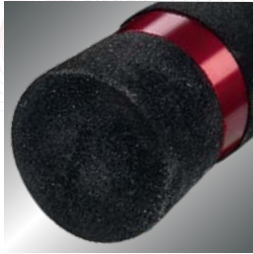

TEAM WALLER Z – BOJE

Introducing our new power rods using HT Cross Winding technology for catfish angling in rivers or lakes, in lengths of 2.75m, 3.05m and 3.30m and a casting weight of 300-600g. The rods have a semi-parabolic action that really demonstrates their strength when playing a fish in water where there are a lot of obstructions. The enormously strong backbone can be counted on to prevent the fish from settling in behind obstructions, and overcomes even the most powerful runs and tail flapping with no trouble at all. And of course, it also ensures that strikes will hold, even at substantial distances, and the fish can be brought securely to the bank. The rods come with extra stable SIC guides and a universal reel seat for fixed spool reels and multipliers.

TEAM WALLER Z – SPIN

Whether it's a soft bait, a blinker or a wobbler, with the new TW Waller Z Spin you can cast your lures exactly where you want them, and at real distances. Thanks to the HT Cross Winding technology, these rods are extremely robust, light and have a very sensitive tip, which passes the bait's movement and every take right up to your hand. The rods have plenty of power in reserve too, so always give you the upper hand all when playing the fish. The Z Spin light models are available with a casting weight of 80-150g, and the Z Spin version with a casting weight of 120-210g. The lengths of 2.5m to 3.2m make this series ideally suited for use from boats as well as from the bank.

TEAM WALLER Z – DRIFT

The ideal rods for when you want to draw the bait over the bottom, for example from a boat. So as to be able to feel exactly what the bait is doing under the water, the rods have been designed with an extremely sensitive tip, which allows for perfect bait control and bite recognition. And when playing the fish, the progressive power distribution of the HT Cross Winding blank does all the work to tire the fish as rapidly as possible and bring it swiftly to the surface with no trouble at all.

TEAM WALLER Z – VERTICAL HEAVY

The new vertical catfish rod is the ultimate answer for the really big heavyweights. The completely redesigned blank, using the HT Cross Winding process, is made of high modulus carbon fibres and extremely wear-resistant Zylon fibres. Together, they give this rod extreme stability and strength. This rod now makes it possible for vertical rigs to be guided with absolute precision over the bottom, to even keep the bait dancing around the fish's head if needed. The powerful backbone ensures that the hook sits firmly after a strike, and the fish can be lifted and landed as rapidly as possible. Thanks to the extreme lightness of the rod, fishing can go on for hours without the slightest sign of fatigue.

TEAM WALLER Z FIREBALL

TEAM WALLER Z TWITCH LIGHT

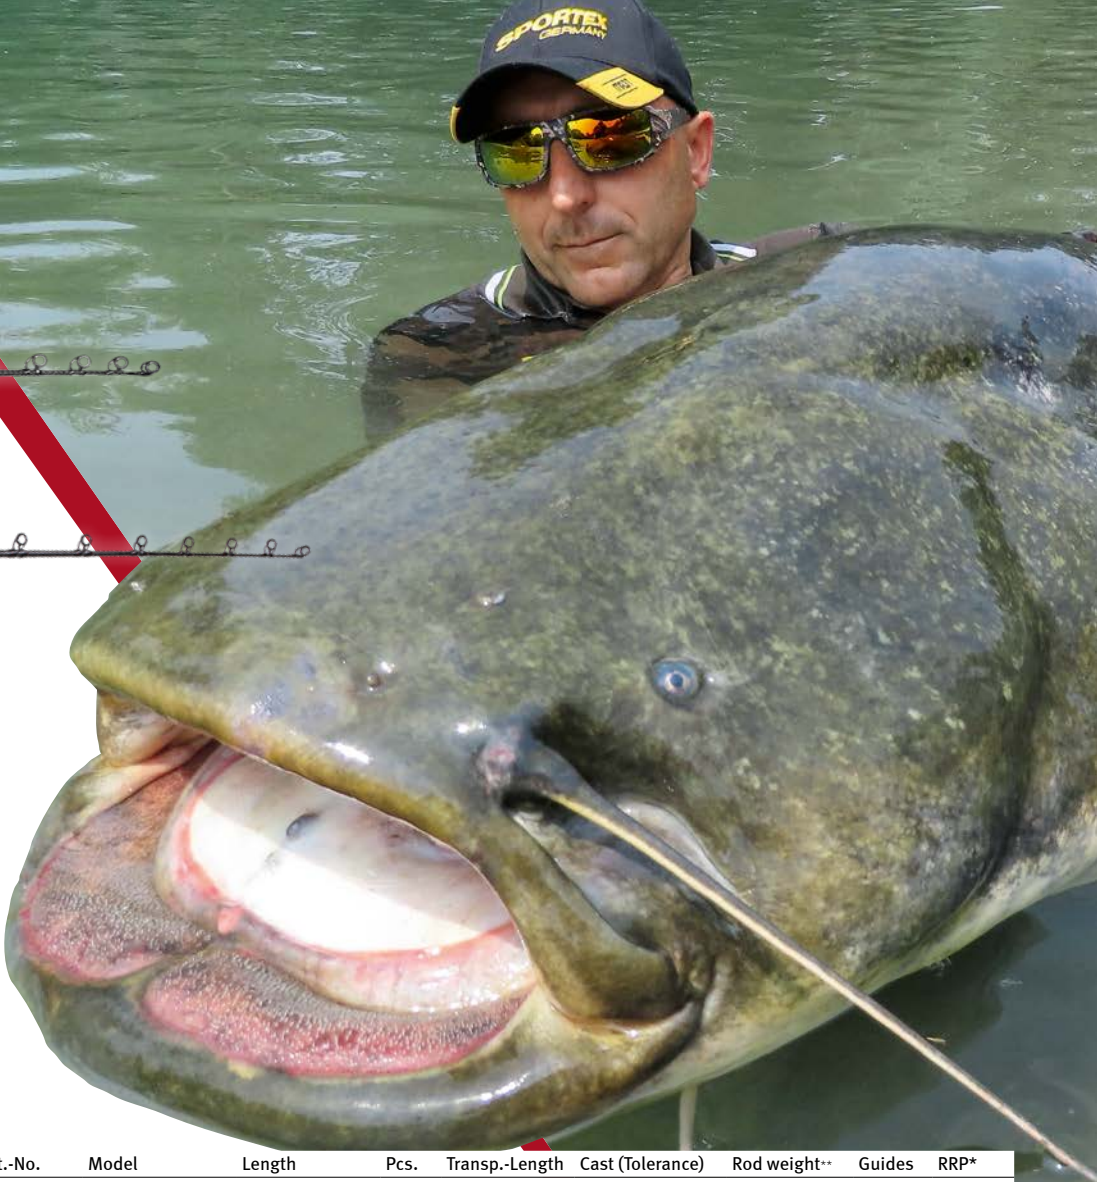

TEAM WALLER Z – FIREBALL

The new vertical catfish rod is the ultimate answer for the really big heavy-weights. The completely redesigned blank, using the HT Cross Winding process, is made of high modulus carbon fibres and extremely wear-resistant Zylon fibres. Together, they give this rod extreme stability and strength. This rod now makes it possible for vertical rigs to be guided with absolute precision over the bottom, to even keep the bait dancing around the fish's head if needed. CATFIRE SPIN

Excellent rods for fishing for catfish with wobblers, soft lures, blinkers etc. The tough, fast blank delivers the bait, right on target, even at long distances. The strong spine means any catfish on the hook tires rapidly and can be landed safe and sure.

CATFIRE BOAT

Designed for drift fishing from a boat. The Catfire Boat is fitted with a tip that is sensitive yet strong, ideal for achieving perfect bait presentation under the water. For a sure strike, and ultimate control of the catfish when playing, the spine has been reinforced with a 3K carbon-mesh fabric. Improved damping properties of the blank keep lost fish to an absolute minimum. These are rods that make fishing for catfish fun; and, of course, they also produce excellent results when used from the bank.

CATFIRE BOJE

Special rods for buoy fishing in rivers and lakes. Their length (up to 3.3m) and stiff action helps keep tension on the line, even over considerable distances. This means rapid and direct contact with the fish right from the bite. The sensitive tip of the rod reliably signals the bite back to the bank, while the powerful spine ensures that the hook stays properly in place after the strike, and the fish can be brought to the bank or the boat as fast as possible. The 2.7m version is perfect for use from a boat at anchor.

SPORTEX CATFIRE NEW

CATFIRE FEEDER

all CATFIRE rods feature a removable Gimbal

CATFIRE VERTICAL

CATFIRE VERTICAL HEAVY INLINER

CATFIRE FEEDER

The latest update of the popular catfish feeder rod, the Catfire Feeder was designed for bottom fishing with natural bait and pellets in partnership with our catfish specialist, Jens Köller. To achieve extra speed, and get better casting distances, the spines of the rods have been reinforced with a 3K carbon-mesh fabric. We have also done a little work on the interchangeable tips. There is now a medium-heavy tip part for use in stillwater, and a heavy tip part for use in rivers and currents. These are excellent all-rounders for difficult bottom fishing for catfish and similar.

CATFIRE VERTICAL

A rod designed especially for vertical fishing for catfish from a boat. The agile blank has enormous reserves of power to tire the fish rapidly when playing, and bring it securely to the surface. A highly sensitive tip reliably signals even tentative nibbles and allows the catfish to take the bait without any resistance. The lightweight blank means the rod can be held comfortably in the hand without any problems, even over long periods.

CATFIRE VERTICAL HEAVY INLINER

This more powerful version of the Catfire Vertical has no guides. The advantage of inline rods is that, because there are no guides and the line runs through the interior, the blank bends noticeably more uniformly under loading, which means more fun when playing the fish. There is also reduced risk under full loading of a guide frame getting pressed into the blank and causing the rod to break. The action of the rod is similar to that of the Catfire Vertical, but the Heavy Inliner has an appreciably stronger spine. This is the perfect rod for when the hunt is on for big cats.

MASTERGRADE GT POPPER

Our new and very high quality rod series for warm water fishing for GTs (Giant Trevally) with heavy poppers. The rods are made from high-performance Japanese carbon and fitted with a powerful tip, necessary for guiding even the biggest poppers properly in the water, for casting poppers long distances and for striking. The Mastergrade GT Popper has a powerful and continuous 'one-piece' action under loading.

MASTERGRADE TUNA SPIN

Developed specifically for fishing for tuna, this specially designed blank made from high-performance Japanese carbon allows for a wide range of baits, such as metal jigs, to be cast with excellent effect. The handle section sits very comfortably in the hand, even under the load imposed by fiercely fighting fish. The Mastergrade Tuna Spin produces a powerful and continuous action under loading.

MASTERGRADE SEACAST

This outstanding series of sea spinning rods is designed for a wide range of deep sea fish in locations like the Mediterranean and can be used from both shore and boat. The Mastergrade Seacast has a light, slim, fast blank, which generates enormous power and has a continuous action under loading. Excellent load and resetting properties launch the bait to very long distances with absolute precision. The tip is extremely sensitive and, in combination with the powerful backbone, makes every strike a certainty.

MASTERGRADE JIGGING

In the development of the Mastergrade Jigging, the main focus was on creating a very slim and lightweight blank that would still have extremely high loading capabilities and a completely continuous action. The light-weight versions (100g and 150g) are perfect for light to medium 'speed jigging'. The heavier versions, at 200g and 250g, are perfectly suited for presenting large soft baits or medium-sized natural baits. Thanks to their extremely lightness, these rods can be fished all day. They are fitted with FUJI Plus baitcast reel seats.

MAGNUS MASTERGRADE SURF

This new longer-distance hunter model for surfcasting has been developed in close cooperation with a very experienced surf casting professional. These exceptional rods use a very fast and powerful blank made of Japanese high-performance carbon, with excellent loading capacities for extra long casts. This allows the casting of weights of more than 200g, without the rod being overloaded. The ideal casting weight for reaching the maximum casting distance is 150g-180g. To achieve best possible bite recognition, the rod has been fitted with a highly sensitive tip enhanced by coloured markings.

MAGNUS JIGGING

MAGNUS SPIN

MAGNUS BOAT

MAGNUS JIGGING

Our Magnus Jigging series has a finely balanced tip action, which provides optimum bait control. The specially matched action allows the bait to be drawn upwards in rapid short bursts for a really seductive presentation. Thanks to the Up-Tide arrangement, the blank has a uniform action with good resistance and without any interruption. When a bite comes, the rod backbone mobilises enormous reserves of strength and, even if a really massive halibut is on the line, the fight is only going to end one way... in a victory for you. The Magnus Jigging models are fitted with Low Rider SIC guides and a durable DPS reel seat from ALPS, as well as a gimbal with a removable EVA cover cap.

MAGNUS SPIN

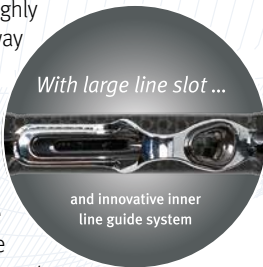

With these from the Magnus Spin series, you are fully geared up to do battle with halibut, cod, coalfish and the like. The slimline, powerful and rapid blank has outstanding strength for casting and then playing the fish. The semi-parabolic action, with traditional hefty power reserves in the handle section, makes it possible for sufficient pressure to be constantly exerted on the hooked fish. Excellent loading and resetting characteristics mean that the bait can be pitched far out towards the horizon – and right on target. The fittings for the Magnus Spin include, among others, SIC guides and a durable DPS reel seat from ALPS.

MAGNUS BOAT

The Magnus Boat series impresses with a tough but lightweight blank made of high-modulus carbon, with uniform force distribution. The particularly sensitive tip will detect bites at greater depths. This also helps with bait control and with better feedback on what the bait is doing under the water. The semi-parabolic action of the Magnus Boat means that fighting fish tire very rapidly and can be brought to the surface with confidence. The rods are fitted with WDB and DB SIC guides and a durable DPS reel seat from ALPS. All Magnus Boat rods also have a gimbal with a removable EVA cover cap. The rods can be fished with a multiplier reel as well as with a fixed spool.

MAGNUS INLINER

The Magnus Inliner series has also been completely updated and extended by a number of shorter-length models. The newly developed blank is now appreciably lighter and slimmer compared to the older model, which makes the rods more evenly balanced in the hand. We made hardly any adjustments to the powerful and highly flexible action, because users love it just the way it is. The new Inliner rods do, of course, still have our innovative helical line guide system, integrated in the blank. Thanks to this, without interrupting the action curve, the line is guided through the entire inner blank. The open line in-feed guide with SIC insert and the accompanying threading wire make sliding the line a whole lot easier too. And a firm DPS reel seat from ALPS makes sure that the reel sits exactly where it should.

With large line slot ...

and innovative inner line guide system

NEPTOON JIGGING

NEPTOON BOAT with Gimbal

NEPTOON JIGGING STATIONÄR **NEW**

NEPTOON SPIN
NEPTOON BOAT

NEPTOON BOAT with ALPS S-6 XN guides

NEPTOON JIGGING

Modern rods with a sensitive tip and a backbone with an enormous loading capacity. The balanced tip action transfers right through the rod and allows the bait to be presented very naturally in the water. The rod has a continuous action, which means when a trophy fish is on the line the full power of the blank comes into play. The rods are fitted with tough EVA handle, strong Seaguide XEG SIC guides, a Pac Bay gimbal with rubber cap and a universal reel seat for use with multipliers or fixed spool reels. The 165cm and 185cm models at 20lbs are fitted with a baitcast reel seat.

NEPTOON BOAT

All-round rods for using artificial or natural baits in Norway, Iceland and similar locations. The NepTooN Boat has a very strong backbone, and a continuous action. The sensitive tip allows for ideal bait presentation and transmits bites with absolute reliability. All the components, such as the SIC boat guides from ALPS, the DPS reel seat from Seaguide and a gimbal with rubber cap from Pac Bay, are designed to be hard-wearing and long-lasting. The special guide arrangement means that multipliers as well as fixed-spool reels can be used.

NEPTOON SPIN

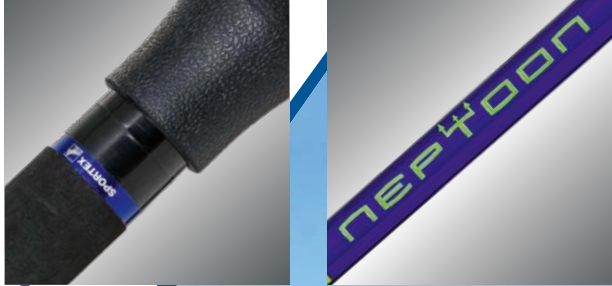

Fast spin rods for modern artificial bait fishing at sea. The dynamic high-resistance blank is perfectly suited for catching cod, black cod and similar species. The rods have very good casting properties and a powerful backbone for effective striking. The NepTooN Spin also allows for ideal bait presentation and first-class control of the fish during playing. The rods are fitted with strong Seaguide XQG SIC guides, Seaguide DPS reel seats and durable Duplon handles.

NEPTOON JIGGING STATIONÄR

This jigging rod has an identical action and the same components as the other NepTooN Jigging models. What is different, are the optimized XQG SIC guides from Seaguide and the DPS reel seat. With this adaption, the rod is perfect for anglers who want to use a spinning reel.

SPORTEX NEPTOON

NEPTOON SURF
These rods were developed in close cooperation with a well-known professional in surf fishing. The aim was to get the very best casting distance from the blank by having the right number of perfectly-spaced guides. The blank has an impressive loading performance and propels the rig towards the horizon, right on target and at enormous speed. The sensitive tip transmits even timid nibbles immediately; and when playing fish it performs magnificently in dampening shock and impact. Coloured markings at the tip also make visual bite identification easier. The rods are fitted with Seaguide BG SIC guides, Seaguide XDPS reel seats and a shrink wrap, balanced handle.

NEPTOON TROLLING
These rods are designed to provide the power needed when trolling for cod and big salmon. Despite this, the blank is sensitive enough to dampen aggressive bites and prevent determined escape attempts. NepTooN Trolling rod can also be used to very good effect when trolling in freshwater. The rods are fitted with strong Seaguide XBG SIC guides, Seaguide DPS reel seats, durable Duplon handles and a gimbal with rubber cap from Pac Bay.

NEPTOON BEACH FEEDER
The Beach Feeder is ideal for catching cod and flatfish from the bank. A very sensitive tip means that when the fish bite there is almost no resistance, and even gentle nibbles are reliably signalled. The rods are of course provided with a very dynamic spine, meaning baits get thrown over good distances. The Beach Feeder is also extremely well suited for fishing from the bank for eels in canals and rivers.

SPORTEX JOLOKIA PILK Black Edition

JOLOKIA PILK Black Edition

JOLOKIA PILK Black Edition

The new Pilk rod series in the SPORTEX sea rod range come with an attractive modern black finish and a very good price-to-performance ratio. These rods are perfect for cod, coalfish or black cod, pollack and other sea predators. The tough, dynamic blank tires the fish rapidly and the

highly sensitive tip allows perfect bait guidance. The rods are available in lengths of 2.4m, 2.7m and 3m, with casting weights of 70g-150g, 120g-220g and 190g-400g. They cover the entire pilk fishing range.

MAGNUS TRAVEL BOAT

Short sectioned boat rods (three sections at 70cm or four sections at 63cm) for easy transport for fishing holidays at sea. Despite the number of sections, the rods still have powerful, identical actions and the same properties and fittings as the two-section version. The rods are available in lengths of 1.85m (20lbs / 30lbs) and 2.10m (30lbs / 50lbs) and 2.10m (30lbs / 50lbs).

MAGNUS TRAVEL SPIN

Thanks to its four-section design, the Magnus Spin Travel is the perfect companion for fishing holidays. The length of the sections, 64cm or 74cm respectively, means the rod fits into most travel bags. The rods are available in 2.40m and 2.70m versions with casting weights of 100g or 150g.

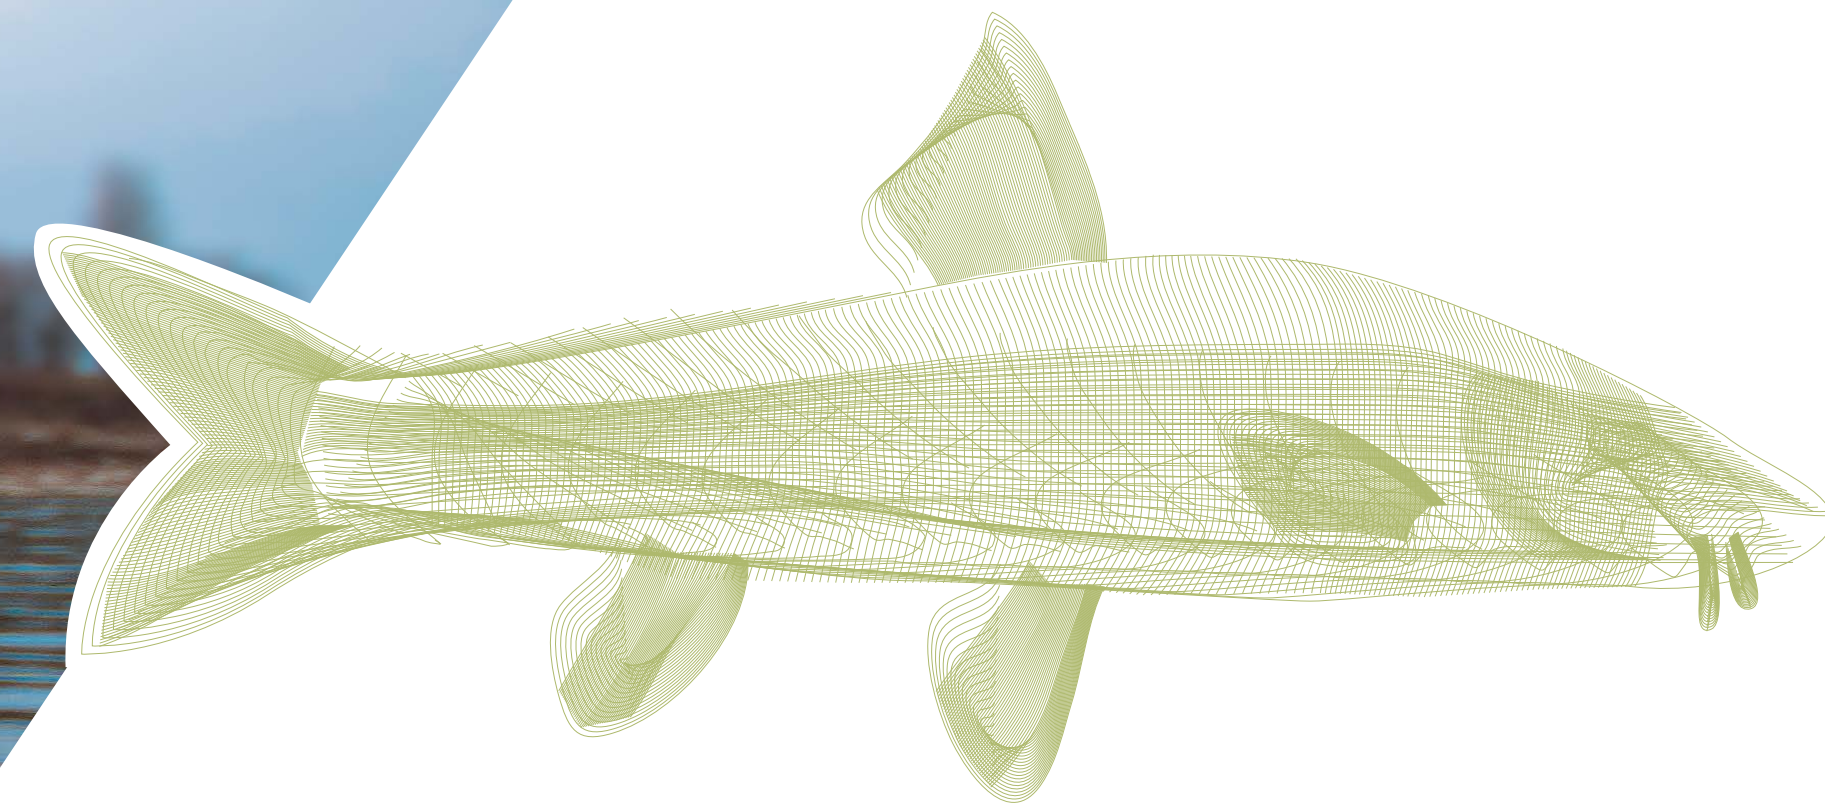

MAGNUS TRAVEL JIGGING

The Magnus Jigging Travel also has the same properties and fittings as its two-section sister model. The rods are available in a 1.85m version (three sections of 70cm) with 20lbs / 30lbs and a 2.10m version (four sections of 63cm) in 30lbs / 50lbs.

NEPTOON TRAVEL

The short sections making up this rod (either 68cm or 74cm) mean that it will comfortably fit in most suitcases. The rods have a high-modulus carbon blank with a semi-parabolic action ideally suited for catching a wide variety of fish. And when it comes to casting, the NepTooN Travel rods are easily as good as the two-piece versions.

COARSE AND TROUT RODS

SPORTEX XCLUSIVE FEEDER NT

All SPORTEX Feeder rods feature three variable Feeder-tips.

The new Xclusive Feeder NT now comes with our fast and powerful Helicore blank. Made of T800 carbon fibres with nano technology, this blank has proved a milestone in rod construction in the spin and carp sectors. The rods now have even better loading properties than their predecessors when it comes to casting and they deploy enormous power when playing a fish.

XCLUSIVE FEEDER NT LIGHT

Perfect for lightweight feeder fishing with feeder baskets at close and middle distances, in both still and flowing water. This rod is at its best when fishing for roach, bream, tench etc. Also very good for fine bottom fishing for zander with small bait fish. Each rod comes with three sensitive carbon feeder tips in sizes 1oz, 2oz and 3oz.

XCLUSIVE MEDIUM LIGHT FEEDER

Ideally suited for light to medium-weight feeder baskets at close and middle distances, in both still and flowing water. This rod is at its best when fishing for roach, bream, tench and medium-sized carp. Provided with three sensitive carbon feeder tips in sizes 2oz, 3oz and 4oz.

XCLUSIVE MEDIUM FEEDER

These universal feeder rods are designed for medium-weight fishing for all non-predators in still and flowing water. The blank has excellent damping properties, minimising the possibility of escape when playing fish. A stiff backbone, with excellent loading capacities, propels the feeder basket to long distances, and quickly tires out fish. These rods cover the widest demands of feeder fishing. Comes with three sensitive carbon feeder tips in sizes 2oz, 3oz and 4oz.

XCLUSIVE MEDIUM HEAVY FEEDER

These rods are ideal for tackling hard-fighting barbel and carp in still and flowing water. They can also be used for eel fishing. Despite their enormous power, they still have the sensitivity needed to handle smaller fish as well. The high reset torque of the blank makes long precise casting effortless. They come with three sensitive carbon feeder tips in sizes 2oz, 3oz and 4oz.

XCLUSIVE HEAVY FEEDER

Designed for fishing with heavy feeder baskets, these rods guide the baskets precisely to their target without excessive effort and regardless of distance. The powerful backbone allows even extra-feisty fish to be guided securely out of the current and into the net. Provided with three sensitive carbon feeder tips in 3oz, 4oz and 5oz.

SPORTEX RAPID FEEDER

RAPID FEEDER

These new universal application feeder rods for still and flowing water have a top price-to-performance ratio. The fast, slimline blank, made from high-modulus carbon, guarantees an immediate strike. The three sensitive feeder tips which come with the rod, in thicknesses of 1.5oz, 2.0oz and 2.2 oz, signal a bite whatever

the water conditions. The powerful backbone of the rod, in conjunction with the extra large guides at the tip, help to ensure long, high-precision casts.

EXCLUSIVE METHOD FEEDER

This newly-developed lightweight rod is ideal for light fishing for trout and more, with its focus is on lightness and sensitivity. The outcome is a very slim and extremely light blank, made of high modulus carbon with a sensitive action that makes for tremendous fun when playing fish. The rods are ideally suited for fishing with floats on rivers, as well as with Spirolinos on lakes. They are also suitable for lake fly fishing from the bank. The rods are fitted with special lightweight guides and a FUJI DPS reel seat. The Exclusive Trout is available in 3.6m and 3.9m with 10 g – 40 g casting weights.

RAPID METHOD FEEDER

Our new float rods have a very good price-performance ratio. They are designed for universal float fishing for species such as tench, bream, young carp fry and so on. They are also ideal for fishing with Spirolinos or Bombardas for trout. The blank, made from HM carbon fibre material, has a powerful backbone with a fast, sensitive tip. Its very good casting properties allow for long, well-targeted casts. The Rapid Float is available in the lengths of 3.3m, 3.6m and 3.9m with casting weights of 10 g – 40 g.

XCLUSIVE MATCH

This highest quality, state-of-the-art match rod is designed for universal use in flowing and still waters. They are built on an incredibly light, slim and fast blank, with a powerful action designed to apply sufficient pressure on big fish. The very fine and sensitive tip guarantees rapid bite indication and a reliable strike. Long, precise casting is made easy, while the SIC Match guides, set well off the blank, reliably prevent the line from sticking.

RAPID MATCH

As with the Exclusive Match models, the blank is very slim and fast. And thanks to the powerful blank, even medium-strength carp can be netted with the minimum of fuss. The narrow-spaced SIC match guides, set high from the blank, prevent wet lines from sticking to the blank and make for long, precise casts. The Rapid Match is available in lengths of 3.90m and 4.20m, with a casting weight of 8-16g.

XCLUSIVE FLOAT NT
The slim blank design of top quality high-modulus carbon material makes a great impression with its speed and loading capacity. The excellent loading properties of the Xclusive Float allow the float to be pitched at long distances and precisely on target. When the fish is being played, the blank reliably absorbs any wild thrashing movements from the fish, which makes for far fewer lost fish. The rod is very effective for trout fishing with Spirolinos, Bombardas etc. And when going after zander with bait fish, the rod cuts a very fine figure. The guide diameters have been selected in such a way that even rubber stoppers can slide through without any problem. The Xclusive Float is available in lengths of 3.60m, 3.90m and 4.20m with a casting weight of 20-40g.

XCLUSIVE FLOAT LIGHT NT
The lighter and even slimmer version of the Xclusive Float series also has a very fast, resistant and sensitive blank. It has been developed especially for float fishing for smaller coarse or prey fish such as roach, rudd, bream etc. It is, of course, also possible to adjust the rods for trout fishing with lighter Spirolinos or pre-weighted floats. Thanks to the fast action of the rods, a sure strike at a long distance is no problem at all. The Xclusive Float Lite is available in lengths of 3.60m and 3.90m with a casting weight of 10-30g.

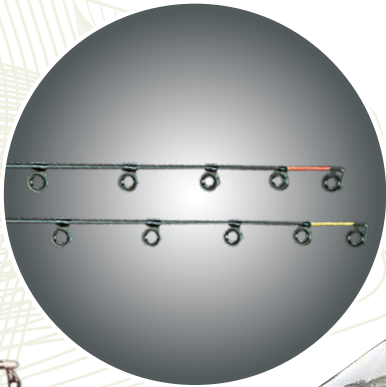

RAPID FLOAT
Our new float rods have a very good price-performance ratio. They are designed for universal float fishing for species such as tench, bream, young carp fry and so on. They are also ideal for fishing with Spirolinos or Bombardas for trout. The blank, made from HM carbon fibre material, has a powerful backbone with a fast, sensitive tip. Its very good casting properties allow for long, well-targeted casts. The Rapid Float is available in the lengths of 3.3m, 3.6m and 3.9m with casting weights of 10g-35g.

tip section available as 1,75lbs. and 2,25lbs.

SPORTEX SPECIAL RODS

**MULTIPICKER
SWING TIP
WINKLE PICKER**

XCLUSIVE BARBEL
The Xclusive Barbel is an old favourite that has now undergone a total modernisation. The completely re-designed blank readily meets every challenge that modern barbel fishing can throw at it, including fixed lead attachment and feeder basket applications. With the two tips at 1.75lbs and 2.25lbs, it is fully equipped to tackle still and flowing water alike. Owing to the harmonious semi-parabolic action, the rod always provides enough power to bring strong fish out of the current and under control. The Xclusive Barbel is the ultimate tool for the feisti

MULTIPICKER, SWING TIP & WINKLE PICKER
All-purpose due to 2 complete tip sections including 2 Winklepicker tips and a swing tip with a common handle section. Anglers who have devoted themselves to fishing with swing tip and winkle pickers will be thrilled by this rod concept. The Multipicker can be used for both types of angling. The special feature about these Multipickers are the 2 complete tips and the common handle section, which, depending on the tip section, provides easy bite indication.

SPORTEX TREMARELLA

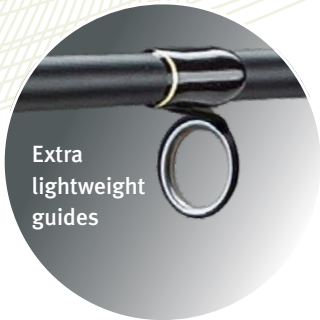

SPORTEX HEGENE

TREMARELLA
The market currently has only telescopic rods to offer the tremarella fisherman. While these have their advantages for easy stowing and carrying, they also have substantial drawbacks, such as noisiness, tendency to break and generally poor actions. However, the new tremarella rods from SPORTEX are based on a three-piece rod, eliminating these disadvantages. These super-light, sensitive rods are the ideal choice for professional tremarella fishing in trout regions. Thanks to the extremely lightweight blank design, hour-long controlled “quivering” of the rod is no problem. The high-speed blank is made from high-modulus carbon with a high reset capacity, allowing for spirolinos or bombardas to be transferred over long distances. The extremely sensitive and fast tip immediately signals the smallest nibble and ensures that the hook set is lightning fast. The rod’s powerful action also means that even big fish tire rapidly once hooked.

HEGENE
This newly-developed lightweight rod is ideal for light fishing for trout and more, with its focus is on lightness and sensitivity. The outcome is a very slim and extremely light blank, made of high modulus carbon with a sensitive action that makes for tremendous fun when playing fish. The rods are ideally suited for fishing with floats on rivers, as well as with Spirolinos on lakes. They are also suitable for lake fly fishing from the bank. The rods are fitted with special lightweight guides and a FUJI DPS reel seat. The Exclusive Trout is available in 3.6m and 3.9m with 10g-30g casting weights.

SPORTEX MYSTIX TROUT

PERFECT RODS FOR TROUT ENTHUSIASTS!

SPORTEX XCLUSIVE TROUT

MYSTIX TROUT
Makes every trout lose strength – and fast! Super sensitive and extra light, the Trout Area rod series offers fantastic casting performance. Designed for trout in both flowing and still waters, the continuous action of the carbon blank delivers extraordinary sensitivity right into the handle section. This allows even the smallest wobblers, twisters, spoons and soft lures to move seductively in the water. These rods also have a backbone strong enough to bring even the biggest and hardest-fighting rainbow trout to heel. They are fitted with high quality 4A cork handles and titanium AT SIC guides.

XCLUSIVE TROUT
This newly-developed lightweight rod is ideal for light fishing for trout and more, with its focus is on lightness and sensitivity. The outcome is a very slim and extremely light blank, made of high modulus carbon with a sensitive action that makes for tremendous fun when playing fish. The rods are ideally suited for fishing with floats on rivers, as well as with Spirlinos on lakes. They are also suitable for lake fly fishing from the bank. The rods are fitted with special lightweight guides and a FUJI DPS reel seat. The Xclusive Trout is available in 3.6m and 3.9m with 10g-30g casting weights.

SPORTEX SYNORIS FLY

SYNORIS FLY

KYANITE FLY

SYNORIS FLY

Sportex has called on 12 years of experience and expertise in carbon fibres, resins, tapers and component choices to develop its next generation fly rod series, Synoris. Proprietary Helicore technology from Sportex fuses state-of-the-art T1000 carbon fibres with a resin enriched by nano particles to create a highly-responsive, well-balanced and powerful blank. Synoris Fly Rods effortlessly and accurately cast extreme distances -beyond the limits of other fly rods – yet giving the firm assurance that this rod still has plenty more to come. They are excellent for overhead, roll and switch casting, and will deliver

dry flies as perfectly as nymphs and streamers. They will also make the toughest of strikes and play the biggest fish with ease. The exclusive blank design features a matt finish in silver-grey and is enhanced with an extra light-weight aluminium reel seat with carbon-inlay. Hard-chromed snake guides, convenient marks to align the rod sections and a classy cork handle complete the impressive aesthetics on this premium rod series. Synoris Fly Rods come in weights 3 to 10 from 260cm up to 300cm. A Czech/Euro-Nymphing rod and a double-handed version, each in 300cm lengths, are also available.

KYANITE FLY

The Kyanite Fly is the ideal rod for ambitious fly fishermen and offers everything a Sportex angler wouldn't want to miss. The superlight HM carbon blank is created with all the quality and precision associated with the Sportex brand. It performs with absolute harmony, is forgiving of mistakes but also powerful - and can surprise even the most seasoned caster. Whether overhead casting, switch casting or roll casting, Kyanite Fly rods create extra tight loops that are equally targeted and precise. In the lower line weights, the rods are perfectly adjusted to the fine-tuned requirements of delicate fishing with dry

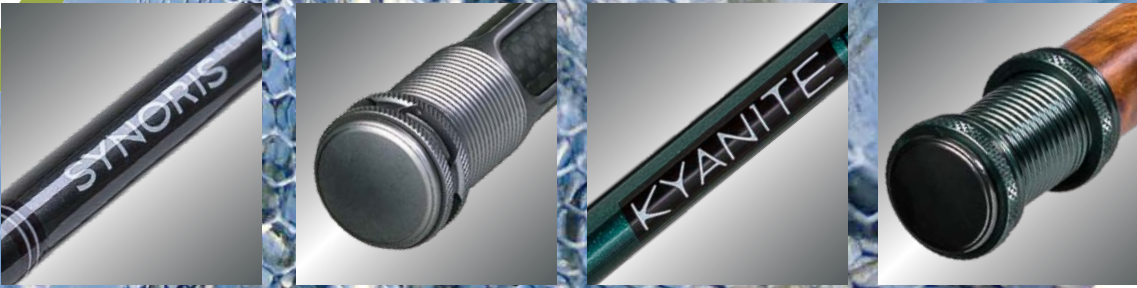

flies and nymphs, while the more powerful models love heavy streamers and relish tackling bigger pike, asp and sea trout. The Kyanite is an absolute joy to use and has the scope to do so much more than other rods in the same class. The matt green blank comes with perfectly matched snake guides, a very light aluminium reel seat with wood inlay and a high quality cork handle. The rod is available in weights 3 to 8 and in lengths from 360cm to 300cm.

You want to protect your valuable rods and reels securely from damage! The SPORTEX Super Safe cases are not only practical and roomy, they provide double protection in comparison with other Bags . On the one hand by means of a flexible, attached inner shell made of shock-resistant

PVC, on the other by means of a waterproof, abrasion-resistant outer surface made of 1.680 D nylon woven fabric. The fitting with robust, corrosion-protected metal zip fasteners, padded interior sections and padded shoulder straps is typically SPORTEX functional and designed for many

years' use. All large Bags additionally have a new and easy-to-use ruck-sack function, that facilitates the transportation of your rods even more. In addition, all of the Bags have a practical fitting for hanging up your Bags . Each SPORTEX case is an ID for your valuation of your passion.

VIII

SUPER-SAFE ROD TUBE FOR ONE RIGGED ROD
SUPER SAFE by SPORTEX is the perfect protection for your high-quality, rigged spinning rods. The SUPER SAFE lining is padded on the inside. An integrated, special reel box facilitates the insertion of the complete assembled rod. At home, simply hang your assembled equipment by the hooks. Perfect! From 125 cm up to 165 cm. Wit hRucksack function.

IX

SUPER-SAFE HARD SHELL BAG FOR CARP RODS
A high-end bag for your carp rods, especially designed for best possible protection of rods and reels. Both separated rod-compartments, with embedded shock resistant inner-shell, offer enough space for one rod with reel each. Inside, the bag is very well padded and each rod can beindividually fixed to allow best possible protection of your rods. Even size #50 guides and large big pit reels are no problem. A long extra side pocket offers enough space for an umbrella, landing net or bank sticks. Two additions side Bags are available for your accessories.

SINGLE SLEEVE FOR CARP RODS
Our brand new single sleeves in 12' and 13' for the safe transport of single, mounted rods. The durable outer material as well as the strong inner padding allow for an excellent protection of your rods. The reel-part was especially designed for large big pit reels. Obviously, rods with size #50 guides fit in comfortably as well. Using the karabiner at the side, several sleeves can be connected.

XI

SUPER-SAFE BAITCAST ROD TUBE FOR AN ASSEMBLED ROD
This Super-safe rod tube for an assembled bait-cast rod is the ideal choice when you need to protect a single-piece rod and reel from impact damage. The length of 2.10 m will accommodate most conventional bait cast rods.

SPORTEX BAGS

XIV

SPORTEX CARRYALL BAGS

SPORTEX has designed these top-quality Carryall bags for use in all weathers. A special PVC surface material, waterproof zip fasteners and waterproof base shell make them the ideal choice for protecting your fishing accessories against the wet. Carryall Bags have a spacious, padded interior compartment and three additional outside pockets. A padded carrying strap and two EVA carrying handles on the side make light work of carrying the bag, even when it's full.

XV

SPORTEX SPINNING BAGS

The perfect bags for the most avid lure anglers. A high quality PVC finish, amply dimensioned overlaps and waterproof zippers reliably protect the interior from moisture in all weather conditions. The premium bag easily holds two extra-large lure boxes and offers separate pockets to tidy stow pliers, hook removal or any other accessory. The basic version (no side pockets) features a mesh pocket in front and a Velcro-strip flap for fast and easy access.
